Capone, Jessica Nicole Fitzsimmons, Cecile Guieu, Joseph A. Resing, 2025-11-06

Most sites of submarine hydrothermal activity remain unknown unexplored and uncharacterized. Although we have limited understanding of how these systems interact with and influence the broader ocean, recent explorations are illuminating a causal link between the solid earth and ocean function. Recent explorations of hydrothermal sites are highlighting the impacts and their feedbacks between geology, chemistry, physics, and biology at different space and time scales. These processes extend from the seafloor through the water column and even sometimes up to the surface layer. In fact, recent discoveries of hydrothermal activity at shallow sites emitting trace metal-rich fluids able to reach the euphotic productive ocean layer (0–100 m) are likely to modify our understanding of the interactions between hydrothermal systems and ocean biogeochemical cycles. This Research Topic welcomes Original Research, Review, Mini Review, Perspective, and Opinions articles focusing on subjects such as: The lateral and vertical transport mechanisms of hydrothermal plumes into the ocean in various systems; The impacts of hydrothermal activity on surface and deep ocean geochemistry, i.e., distribution, speciation, and bioavailability of biogeochemically relevant and toxic trace elements, their isotopes, organic matter, and gasses; The impact of hydrothermal activity on surface ocean communities such as viruses, bacteria, phytoplankton, zooplankton, and their diversity, activity, and impact on marine biogeochemical carbon, nitrogen, and phosphorus cycles; The impact of hydrothermal iron on diazotrophs and feedbacks to plankton community; Hydrothermal fluid micro and macro biology; The effects of hydrothermal geology, geophysics, on fluid geochemistry and/or biology. Research based on a variety of approaches including in situ and satellite observation, process studies in controlled or semi-controlled systems, modeling, and omics are welcome.

Climate Change and Estuaries Michael J. Kennish, Hans W. Paerl, Joseph R. Crosswell, 2023-09-15

Climate change is having an increasing impact on coastal estuarine and marine environments worldwide. This book provides state-of-the-art coverage of climate change effects on estuarine ecosystems from local, regional, and global perspectives. With editors among the most noted international scholars in coastal ecology and estuarine science and contributors who are world-class in their fields, the chapters in this volume consist of comprehensive studies in coastal estuarine and marine sciences, climate change, and coastal management and provide an extensive international collection of data in tabular, illustrated, and narrative formats useful for coastal scientists, planners, and managers. Comprised of three sections: 1) physical/chemical aspects, 2) biological aspects, and 3) management aspects, the book not only examines climatic and non-climatic drivers of change affecting coastal estuarine and marine environments but also their interactions and effects on populations of organisms, communities, habitats, and ecosystems.
