Visual Attention Richard D. Wright, 1998-10-29 Paying attention is something we are all familiar with and often take for granted yet the nature of the operations involved in paying attention is one of the most profound mysteries of the brain This book contains a rich interdisciplinary collection of articles by some of the pioneers of contemporary research on attention Central themes include how attention is moved within the visual field attention's role during visual search and the inhibition of these search processes how attentional processing changes as continued practice leads to automatic performance how visual and auditory attentional processing may be linked and recent advances in functional neuro imaging and how they have been used to study the brain's attentional network

Principles of Visual Attention Claus Bundesen, Thomas Habekost, 2008-08-14 The nature of attention is one of the oldest and most central problems in psychology Principles of Visual Attention contains a detailed review of the most important research done on attention in vision spanning cognitive psychology brain imaging patient studies and recordings from single cells in the visual cortex

Attention and consciousness in different senses Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e.g. focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e.g. awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e.g. olfaction or audition it is

currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one's own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

Visual Attention and Cognition W. H. Zangemeister, H. S. Stiehl, C. Freksa, 1996-01-01
Hardbound The goal of this book is to put together some of the main interdisciplinary aspects that play a role in visual attention and cognition The book is aimed at researchers and students with interdisciplinary interest In the first chapter a general discussion of the influential scanpath theory and its implications for human and robot vision is presented Subsequently four characteristic aspects of the general theme are dealt with in topical chapters each of which presents some of the different viewpoints of the various disciplines involved They cover neuropsychology clinical neuroscience modeling and applications Each of the chapters opens with a synopsis tying together the individual contributions

Structuring Mind
Sebastian Watzl, 2017 What is attention How does attention shape consciousness In an approach that engages with foundational topics in the philosophy of mind the theory of action psychology and the neurosciences this book provides a unified and comprehensive answer to both questions Sebastian Watzl shows that attention is a central structural feature of the mind The first half of the book provides an account of the nature of attention Attention is prioritizing it consists in regulating priority structures Attention is not another element of the mind but constituted by structures that organize integrate and coordinate the parts of our mind Attention thus integrates the perceptual and intellectual the cognitive and motivational and the epistemic and practical The second half of the book concerns the relationship between attention and consciousness Watzl argues that attentional structure shapes consciousness into what is central and what is peripheral The center periphery structure of consciousness cannot be reduced to the structure of how the world appears to the subject What it is like for us thus goes beyond the way the world appears to us On this basis a new view of consciousness is offered In each conscious experience we actively take a stance on the world we appear to encounter It is in this sense that our conscious experience is our subjective perspective

Visual Attention, 1998 Paying attention is something we are all familiar with and often take for granted yet the nature of the operations involved in paying attention is one of the most profound mysteries of the brain This book contains a rich interdisciplinary collection of articles by some of the pioneers of contemporary
