Xenotransplantation Xenotransplantation:

Xenotransplantation Daniel J. Hurst, Luz Padilla, Wayne D. Paris, 2023-06-21 This is the first volume to comprehensively discuss the ethical regulatory and social aspects of xenotransplantation research Organized into four parts Xenotransplantation begins by examining ethical issues around informed consent of the potential xenograft recipient the major ethical issues encountered when doing this research on pigs and allocation issues Part two examines regulatory aspects from a global perspective specifically from three major regions of the world doing xenotransplantation research currently of which include the United States Western Europe and Asia Following this part three describes religious aspects of xenotransplantation amongst the major world religions including Christianity Islam Judaism and Hinduism The book closes with an analysis of quantitative and qualitative studies conducted by the editors that assess the public's perception of xenotransplantation Featuring original data collected by the editors this book is an instrumental resource for all clinicians involved in the research and practice of xenotransplantation

Xenotransplantation Sheila McLean, Laura Williamson, 2005 One of the leading causes of death is organ failure and the supply of replacement parts is limited due to its dependence on donors This volume examines the legal and ethical issues surrounding xenotransplantation and considers the implications for the future *Xenotransplantation* Shuji Miyagawa, 2012-02-03 Accompanied by the advent of animal cloning the technique of nuclear transfer produced alpha1 3 galactosyltransferase knockout Gal KO pigs in many institutes including the ones in Japan at the beginning of 21st Century In addition the controversy of the risks of PERV has gradually minimized because of the fact that there are no cases of PERV infections reported in humans Furthermore a large clinical wave for islet allotransplantation resumed the interest of xenotransplantation especially porcine islet transplantation and some exceptions Clinical trials were done in many countries so far such as Sweden China Mexico USA Inventory of Human

Xenotransplantation Practices IXA and HUG in collaboration with WHO In addition a new clinical trial was approved by the government and resumed the porcine islet transplantation research in New Zealand two years ago **Xenotransplantation and Risk** Sara Fovargue, 2011-11-17 Some developing biotechnologies challenge accepted legal and ethical norms because of the risks they pose Xenotransplantation cross species transplantation may prolong life but may also harm the xeno recipient and the public due to its potential to transmit infectious diseases These trans boundary diseases emphasise the global nature of advances in health care and highlight the difficulties of identifying monitoring and regulating such risks and thereby protecting individual and public health Xenotransplantation raises questions about how uncertainty and risk are understood and accepted and exposes tensions between private benefit and public health Where public health is at risk a precautionary approach informed by the harm principle supports prioritising the latter but the issues raised by genetically engineered solid organ xenotransplants have not as yet been sufficiently discussed This must occur prior to their clinical introduction because of the necessary changes to accepted norms which are needed to appropriately safeguard individual

and public health *Xenotransplantation* Brigitte E. S. Jansen, 2008 *Exploring the Ethics of Clinical Xenotransplantation* Christopher Bobier, Adam Omelianchuk, Daniel J. Hurst, 2025-08-29 This book provides a comprehensive examination of the ethics of xenotransplantation Due to the global shortage of organs for transplantation there is increasing interest in cross species transplantation or xenotransplantation among researchers and clinicians Proponents of xenotransplantation envision a future in which transplantable organs can be safely and efficiently grown in genetically modified pigs This book provides an overview of the major ethical issues involved in xenotransplantation Xenotransplantation touches on almost every area of bioethics animal research public health patient selection allocation global justice pediatric research and informed consent Each chapter provides a nuanced overview of the positions that have been offered on a specific topic and the authors seek to provide a way forward Exploring the Ethics of Clinical Xenotransplantation is an essential resource for researchers students and clinicians working in bioethics medical ethics animal ethics and public health policy **Clinical Xenotransplantation** David K. C. Cooper, Guerard Byrne, 2020-09-08 This title provides an illuminating examination of the current state of xenotransplantation grafting or transplanting organs or tissues between members of different species and how it might move forward into the clinic To be sure this is a critical topic as a major problem that remains worldwide is an inadequate supply of organs from deceased human donors severely limiting the number of organ transplants that can be performed each year Based on presentations given at a major conference on xenotransplantation this title includes important views from many leading experts who were invited to present their data and opinions on how xenotransplantation can advance into the clinic Attention was concentrated on pig kidney and heart transplantation as it is in regard to these organs that most progress has been made Collectively these chapters effectively highlight the many advantages of xenotransplantation to patients with end stage organ failure thereby encouraging the mapping of a concrete pathway to clinical xenotransplantation The book is organized across 22 chapters beginning with background information on clinical and experimental xenotransplantation Following this are discussions addressing how pigs can be genetically engineered for their organs to be resistant to the human immune response through deletion of pig xenoantigens and the insertion of protective human transgenes Subsequent chapters analyze complications that arise in practice comparing allotransplant and xenotransplant rejection The selection of the ideal patients for the first clinical trials is discussed Finally the book concludes with an analysis on the regulatory economic and social aspects of this research including FDA perspectives and the sensitive psychosocial factors regarding allotransplantation and xenotransplantation A major and timely addition to the literature Clinical Xenotransplantation will be of great interest to all researchers physicians and academics from other disciplines with an interest in xenotransplantation *Xenotransplantation* Institute of Medicine, Committee on Xenograft Transplantation: Ethical Issues and Public Policy, 1996-07-12 Xenotransplantation involves the transplantation of cells tissues and whole organs from one species to another Interest in animal to human xenotransplants has been spurred by the continuing shortage of donated human organs

and by advances in knowledge concerning the biology of organ and tissue rejection The scientific advances and promise however raise complex questions that must be addressed This book considers the scientific and medical feasibility of xenotransplantation and explores the ethical and public policy issues surrounding the possibility of renewed clinical trials The volume focuses on the science base of xenotransplantation public health risks of infectious disease transmission and ethical and public policy issues including the views of patients and their families **The Minipig in Biomedical Research** Peter A. McAnulty,Anthony D. Dayan,Niels-Christian Ganderup,Kenneth L. Hastings,2011-12-19 The Minipig in Biomedical Research is a comprehensive resource for research scientists on the potential and use of the minipig in basic and applied biomedical research and the development of drugs and chemicals Written by acknowledged experts in the field and drawing on the authors global contacts and experience with regulatory authorities and **Progress of Allo- and Xeno-Transplantation Facilitating the Initial Xeno-Kidney and Islet Clinical Trials** Burcin Ekser,Lisha Mou,Hanchao Gao,2022-10-11
