Zajacz, 2019-08-06 How early twentieth century American policymakers sought to gain control over radiotelegraphy networks

in an effort to advance the global position of the United States In *Reluctant Power* Rita Zaj cz examines how early twentieth century American policymakers sought to gain control over radiotelegraphy networks in an effort to advance the global position of the United States Doing so she develops an analytical framework for understanding the struggle for network control that can be applied not only to American attempts to establish a global radio network in the early twentieth century but also to current US efforts to retain control of the internet In the late nineteenth century Britain was seen to control both the high seas and the global cable communication network under the sea By the turn of the twentieth century Britain s geopolitical rivals including the United States looked to radiotelegraphy that could circumvent Britain s dominance Zaj cz traces policymakers attempts to grapple with both a new technology radiotelegraphy and a new corporate form the multinational corporation which managed the network and acted as a crucial intermediary She argues that both foreign policy and domestic radio legislation were shaped by the desire to harness radiotelegraphy for geopolitical purposes and reveals how communication policy and aspects of the American legal system adjusted to the demands of a rising power The United States was a reluctant power during the early twentieth century because policymakers were unsure that companies headquartered in the United States were sufficiently American and doubted that their strategies served the national interest

Decoding the Social World Sandra Gonzalez-Bailon,2017-12-22 How data science and the analysis of networks help us solve the puzzle of unintended consequences Social life is full of paradoxes Our intentional actions often trigger outcomes that we did not intend or even envision How do we explain those unintended effects and what can we do to regulate them In *Decoding the Social World* Sandra Gonz lez Bail n explains how data science and digital traces help us solve the puzzle of unintended consequences offering the solution to a social paradox that has intrigued thinkers for centuries Communication has always been the force that makes a collection of people more than the sum of individuals but only now can we explain why digital technologies have made it possible to parse the information we generate by being social in new imaginative ways And yet we must look at that data Gonz lez Bail n argues through the lens of theories that capture the nature of social life The technologies we use in the end are also a manifestation of the social world we inhabit Gonz lez Bail n discusses how the unpredictability of social life relates to communication networks social influence and the unintended effects that derive from individual decisions She describes how communication generates social dynamics in aggregate leading to episodes of collective effervescence and discusses the mechanisms that underlie large scale diffusion when information and behavior spread like wildfire She applies the theory of networks to illuminate why collective outcomes can differ drastically even when they arise from the same individual actions By opening the black box of unintended effects Gonz lez Bail n identifies strategies for social intervention and discusses the policy implications and how data science and evidence based research embolden critical thinking in a world that is constantly changing

Zoning China Luzhou Li, 2024-02-06 An examination of cultural zoning in China considers why government regulation of online video is so much more lenient than regulation of broadcast television In *Zoning China* Luzhou Li investigates why the Chinese government regulates online video relatively leniently while tightly controlling what appears on broadcast television Li argues that television has largely been the province of the state even as the market has dominated the development of online video Thus online video became a space where people could question state media and the state s preferred ideological narratives about the nation history and society Li connects this relatively unregulated arena to the second channel that opened up in the early days of economic reform piracy in all its permutations She compares the dual cultural sphere to China s economic zoning the marketized domain of online video is the cultural equivalent of the Special Economic Zones which were developed according to market principles in China s coastal cities Li explains that although the relaxed oversight of online video may seem to represent a loosening of the party state s grip on media the practice of cultural zoning in fact demonstrates the the state s strategic control of the media environment She describes how China s online video industry developed into an original creative force of production and distribution that connected domestic private production companies transnational corporations and a vast network of creative labor from amateurs to professional content creators Li notes that China has increased state management of the internet since 2014 signaling that online and offline censorship standards may be unified Cultural zoning as a technique of cultural governance however will likely remain **Privacy on the Ground** Kenneth A. Bamberger, Deirdre K. Mulligan, 2024-05-28 An examination of corporate privacy management in the

United States Germany Spain France and the United Kingdom identifying international best practices and making policy recommendations Barely a week goes by without a new privacy revelation or scandal Whether by hackers or spy agencies or social networks violations of our personal information have shaken entire industries corroded relations among nations and bred distrust between democratic governments and their citizens Polls reflect this concern and show majorities for more broader and stricter regulation to put more laws on the books But there was scant evidence of how well tighter regulation actually worked on the ground in changing corporate or government behavior until now This intensive five nation study goes inside corporations to examine how the people charged with protecting privacy actually do their work and what kinds of regulation effectively shape their behavior And the research yields a surprising result The countries with more ambiguous regulation Germany and the United States had the strongest corporate privacy management practices despite very different cultural and legal environments The more rule bound countries like France and Spain trended instead toward compliance processes not embedded privacy practices At a crucial time when Big Data and the Internet of Things are snowballing Privacy on the Ground helpfully searches out the best practices by corporations provides guidance to policymakers and offers important lessons for everyone concerned with privacy now and in the future **Open Space** Mariel Borowitz,2024-02-06

An examination of environmental satellite data sharing policies offering a model of data sharing policy development case and practical recommendations for increasing global data sharing Key to understanding and addressing climate change is continuous and precise monitoring of environmental conditions Satellites play an important role in collecting climate data offering comprehensive global coverage that can t be matched by in situ observation And yet as Mariel Borowitz shows in this book much satellite data is not freely available but restricted this remains true despite the data sharing advocacy of international organizations and a global open data movement Borowitz examines policies governing the sharing of environmental satellite data offering a model of data sharing policy development and applying it in case studies from the United States Europe and Japan countries responsible for nearly half of the unclassified government Earth observation satellites Borowitz develops a model that centers on the government agency as the primary actor while taking into account the roles of such outside actors as other government officials and non governmental actors as well as the economic security and normative attributes of the data itself The case studies include the U S National Aeronautics and Space Administration NASA and the U S National Oceanographic and Atmospheric Association NOAA and the United States Geological Survey USGS the European Space Agency ESA and the European Organization for the Exploitation of Meteorological Satellites EUMETSAT and the Japanese Aerospace Exploration Agency JAXA and the Japanese Meteorological Agency JMA Finally she considers the policy implications of her findings for the future and provides recommendations on how to increase global sharing of satellite data Cyberinsurance Policy Josephine Wolff,2022-08-30 Why cyberinsurance has not improved cybersecurity and what governments can do to make it a more effective tool for cyber risk management As cybersecurity

incidents ranging from data breaches and denial of service attacks to computer fraud and ransomware become more common a cyberinsurance industry has emerged to provide coverage for any resulting liability business interruption extortion payments regulatory fines or repairs In this book Josephine Wolff offers the first comprehensive history of cyberinsurance from the early Internet Security Liability policies in the late 1990s to the expansive coverage offered today Drawing on legal records government reports cyberinsurance policies and interviews with regulators and insurers Wolff finds that cyberinsurance has not improved cybersecurity or reduced cyber risks Wolff examines the development of cyberinsurance comparing it to other insurance sectors including car and flood insurance explores legal disputes between insurers and policyholders about whether cyber related losses were covered under policies designed for liability crime or property and casualty losses and traces the trend toward standalone cyberinsurance policies and government efforts to regulate and promote the industry Cyberinsurance she argues is ineffective at curbing cybersecurity losses because it normalizes the payment of online ransoms whereas the goal of cybersecurity is the opposite to disincentivize such payments to make ransomware less profitable An industry built on modeling risk has found itself confronted by new technologies before the risks posed by those technologies can be fully understood

Hate Spin Cherian George, 2016-09-23 How right wing political entrepreneurs around the world use religious offense both given and taken to mobilize supporters and marginalize opponents In the United States elements of the religious right fuel fears of an existential Islamic threat spreading anti Muslim rhetoric into mainstream politics In Indonesia Muslim absolutists urge suppression of churches and minority sects fostering a climate of rising intolerance In India Narendra Modi s radical supporters instigate communal riots and academic censorship in pursuit of their Hindu nationalist vision Outbreaks of religious intolerance are usually assumed to be visceral and spontaneous But in *Hate Spin* Cherian George shows that they often involve sophisticated campaigns manufactured by political opportunists to mobilize supporters and marginalize opponents Right wing networks orchestrate the giving of offense and the taking of offense as instruments of identity politics exploiting democratic space to promote agendas that undermine democratic values George calls this strategy hate spin a double sided technique that combines hate speech incitement through vilification with manufactured offense taking the performing of righteous indignation It is deployed in societies as diverse as Buddhist Myanmar and Orthodox Christian Russia George looks at the world s three largest democracies where intolerant groups within India s Hindu right America s Christian right and Indonesia s Muslim right are all accomplished users of hate spin He also shows how the Internet and Google have opened up new opportunities for cross border hate spin George argues that governments must protect vulnerable communities by prohibiting calls to action that lead directly to discrimination and violence But laws that try to protect believers feelings against all provocative expression invariably backfire They arm hate spin agents offense taking campaigns with legal ammunition Anti discrimination laws and a commitment to religious equality will protect communities more meaningfully than misguided attempts to insulate them from
