Levialdi, Bertrand Zavidovique, 2011-05-25 The exponential explosion of images and videos concerns everybody's common life since this media is now present everywhere and in all human activities. Scientists, artists, and engineers in any field need to be aware of the basic mechanisms that allow them to understand how images are essentially information carriers. Images bear a strong evocative power because their perception quickly brings into mind a number of related pictorial contents of past experiences and even of abstract concepts like pleasure, attraction, or aversion. This book analyzes the visual hints thanks to which images are generally interpreted, processed, and exploited both by humans and computer programs. Comprehensive introductory text. Introduces the reader to the large world of imagery on which many human activities are based, from politics to entertainment, from technical reports to artistic creations. Provides a unified framework where both biological and artificial vision are discussed through visual cues, through the role of contexts, and the available multi-channels to deliver information.

Within a generation, over three billion will be suffering from water stress. This text analyzes the issues in this crisis of management and shows how water can be used effectively and productively. The key to sustainable water resources is an integrated approach. The authors assert that careful planning and concerted action can make the fundamental changes needed, and that the implications of not dealing with the crisis are immense. The book comes with downloadable resources containing background research and scenarios. **A**
