Nobuo Ohta, Colin M. MacLeod, Bob Uttl

Visual Search And Attention A Special Issue Of Visual Cognition:

Visual Search and Attention Hermann J. Müller, Joseph Krummenacher, 2006 This special issue of Visual Cognition collects some 30 articles on Visual Search and Attention by leading experts from a variety of disciplines including experimental psychology neuropsychology neurophysiology and computational modelling The articles are updated versions of papers presented at the 2003 Munich Visual Search Symposium The symposium's goal carried forward in this collection was to foster an interdisciplinary dialogue in order to identify important shared issues and consider ways of how these can be resolved using convergent methodologies Reflecting the symposium discussions the Special Issue is divided into four thematic sections preattentive processing and role of memory in visual search brain mechanisms and computational modelling of visual search

Visual Selective Attention Claus Bundesen, Hitomi Shibuya, 1995 This special issue of Visual Cognition features empirical and theoretical contributions by leading research scholars in the field The volume begins with a general introduction and an authoritative review of work on spatial attention in the flankers task Next a series of empirical articles reports important new findings on visual selection by spatial location A second section contrasts by presenting recent empirical findings on visual selection by other criteria Finally four articles present major theoretical statements on aspects of visual attention As a whole the issue forms a substantial contribution to the literature on visual selective attention

Visual Attention and Cognition W.H. Zangemeister, H.S. Stiehl, C. Freksa, 1996-09-23 The goal of this book is to put together some of the main interdisciplinary aspects that play a role in visual attention and cognition The book is aimed at researchers and students with interdisciplinary interest In the first chapter a general discussion of the influential scanpath theory and its implications for human and robot vision is presented Subsequently four characteristic aspects of the general theme are dealt with in topical chapters each of which presents some of the different viewpoints of the various disciplines involved They cover neuropsychology clinical neuroscience modeling and applications Each of the chapters opens with a synopsis tying together the individual contributions

Visual Cognition: Visual Selective Attention Bundesen., Bundesen, 1998-03 This volume traces the modern critical and performance history of this play one of Shakespeare's most loved and most performed comedies The essay focus on such modern concerns as feminism deconstruction textual theory and queer theory

The Oxford Handbook of Attention Kia Nobre, Sabine Kastner, 2018 During the last three decades there have been enormous advances in our understanding of the neural mechanisms of selective attention at the network as well as the cellular level The Oxford Handbook of Attention brings together the different research areas that constitute contemporary attention research into one comprehensive and authoritative volume In 40 chapters it covers the most important aspects of attention research from the areas of cognitive psychology neuropsychology human and animal neuroscience computational modelling and philosophy The book is divided into 4 main sections Following an introduction from Michael Posner the book starts by looking at theoretical models of attention The next two sections are dedicated to spatial attention and non spatial attention

respectively Within section 4 the authors consider the interactions between attention and other psychological domains The last two sections focus on attention related disorders and finally on computational models of attention Aimed at both scholars and students the Oxford Handbook of Attention provides a concise and state of the art review of the current literature in this field

Dynamic Cognitive Processes Nobuo Ohta, Colin M. MacLeod, Bob Uttl, 2006-06-09 The conference from which this book derives took place in Tsukuba Japan in March 2004 The fifth in a continuing series of conferences this one was organized to examine dynamic processes in lower order cognition from perception to attention to memory considering both the behavioral and the neural levels We were fortunate to attract a terrific group of contributors representing five countries which resulted in an exciting conference and as the reader will quickly discover an excellent set of chapters In Chapter 1 we will provide a sketchy road map to these chapters elucidating some of the themes that emerged at the conference The conference itself was wonderful We very much enjoyed the variety of viewpoints and issues that we all had the opportunity to grapple with There were lively and spirited exchanges and many chances to talk to each other about exciting new research precisely what a good conference should promote We hope that the readers of this book will have the same experience moving from careful experimental designs in the cognitive laboratory to neural mechanisms measured by new technologies from the laboratory to the emergency room from perceptual learning to changes in memory over decades all the while squarely focusing on how best to explain cognition not simply to measure it Ultimately the goal of science is of course explanation We also hope that the reader will come away absolutely convinced that cognition is a thoroughly dynamic interactive system

VOCUS: A Visual Attention System for Object Detection and Goal-Directed Search Simone Frintrop, 2006-04-06 This monograph presents a complete computational system for visual attention and object detection VOCUS Visual Object detection with a Computational attention System represents a major step forward on integrating data driven and model driven information into a single framework Additionally the volume contains an extensive review of the literature on visual attention detailed evaluations of VOCUS in different settings and applications of the system

The Cognitive Neuropsychology of Attention Shane O'Mara, Vincent Walsh, 1994 The theme of this Special Issue is one that is ill served by the existing neuropsychological literature A publication that collates reviews of the developmental physiological clinical and cognitive aspects of this topic is therefore timely and would prove valuable to clinicians researchers and students alike The underlying problem addressed by the invited contributors is how attention is manifest in the intact brain and how disorders of attention present themselves in the damaged brain The topics to be covered will range from the physiology of attention as revealed by single unit recording studies of extra striate cortex of monkeys and PET scans in humans and low frequency EEG recordings to disorders of attention after brain damage e g stroke and chronic pathological disorders of the brain e g dyslexia and mental retardation The range of contributions to the Special Issue demonstrates that the kinds of attentional processing required are determined by the task in hand Correspondingly the volume discusses attention in the

parietal temporal and frontal lobes of the human and macaque brain investigated by clinical electrophysiological and behavioural methods Attentional processes are also shown to be distributed in the brain and the effects of diminished attentional capacities which do not result from focal brain lesions are discussed in the context of mental retardation and dyslexia Eye Movements and Visual Cognition Raymond M. Klein ,Simon P. Livversedge,2020-12-29 This eBook is a volume based on the Eye Movements and Visual Cognition Special Issue published in the journal Vision by MDPI and edited by Raymond Klein and Simon Livversedge The eBook comprises 19 high quality chapters that are original and topical works by leading academic figures in the field of human vision and visual cognition In putting together the book we aimed to provide an informative body of work to stimulate and foster useful intellectual exchange between individuals working on basic theoretical issues as well as on more applied aspects of vision and cognitive science From the outset we sought papers that provide concise and astute reviews of topics within this broad field The present volume includes reviews that are narrative critiquing and summarizing research on a topic tutorial with a focus on methods and findings empirical e g meta analytic and theoretically synthetic The eBook also features chapters with new empirical content that resolves an undecided issue stemming from an evaluation of the literature Finally where possible we also selected papers that bridge theoretical and applied issues and provide insight into behavior and its neural substrate All chapters were subject to peer review and went through several rounds of revision prior to acceptance The Psychology of Attention Elizabeth Styles,1997-10 Views on attention have undergone continuous evolution since the early work of the 1950s Since that time the questions asked about attention consciousness and control have changed and evidence drawn into the debate comes not only from experimental psychology but also from neurophysiology neuropsychology and computational modelling As evidence has accumulated theories have changed and fundamental assumptions have been challenged Rather than asking What is attention people now consider Why does attentional behaviour appear the way it is This textbook charts the development of these ideas through the examination of a variety of tasks considered to involve attentional behaviour together with evidence from studies of patients neurophysiology and cognitive modelling After a consideration of what attention might be and whether it is a cause or an effect this book describes and discusses work on selective auditory attention It also deals with problems of divided attention task combination automaticity and intentional control selection for action conscious and unconscious processing in both normal experimental subjects and neuropsychological patients and neuropsychological and computational aspects of attention
