Visualizing Information Using Svg And X3d:

Visualizing Information Using SVG and X3D Vladimir Geroimenko, 2005-01-04 This is the first book devoted to both SVG and X3D as a new and universal means of visualizing information It presents the state of the art research emerging in this novel area and introduces SVG and X3D fundamentals and leading authoring tools The key topics covered include The foundations of SVG and X3D Data information knowledge and network visualization Advanced and distributed user interfaces Visualizing metadata and the Semantic Web Visual interfaces to Web services New trends and paradigms in publishing and Interactive TV Displaying geographically referenced data and chemical structures Advanced use of Adobe Illustrator and X3D Edit authoring tools This book will be essential reading not only for researchers Web developers and graduate students but also for undergraduates and everyone who is interested in using the next generation computer graphics on their websites

Visualizing the Semantic Web Vladimir Geroimenko, Chaomei Chen, 2006-07-01 The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from the existing data and metadata and so on Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework OWL Web Ontology Language and many other technologies help to erect a multistory building of the Semantic Web layer by layer by adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data

Visualizing Information Using SVG and X3D Vladimir Geroimenko, Chaomei Chen, 2005-11-19 Correcting the Great Mistake People often mistake one thing for another That's human nature However one would expect the leaders in a particular field of endeavour to have superior abilities to discriminate among the developments within that field That is why it is so perplexing that the technology elite supposedly savvy folk such as software developers marketers and businessmen have continually mistaken Web based graphics for something it is not The first great graphics technology for the Web VRML has been mistaken for something else since its inception Viewed variously as a game system a format for architectural walkthroughs a platform for multi user chat and an augmentation of reality VRML may qualify as the least understood invention in the history of information technology Perhaps it is so because when VRML was originally introduced it was touted as a tool for putting the shopping malls of the world online

at once prosaic and horrifyingly mundane to those of us who were developing it Perhaps those first two initials VR created expectations of sprawling photorealistic fantasy landscapes for exploration and play across the Web Or perhaps the magnitude of the invention was simply too great to be understood at the time by the many ironically even by those spending the money to underwrite its development Regardless of the reasons VRML suffered in the mainstream as it was twisted to meet unintended ends and stretched far beyond its limitations

Innovations in 3D Geo Information Systems Alias

Abdul-Rahman,Sisi Zlatanova,Volker Coors,2007-12-31 This book covers various aspects of spatial data modelling specifically regarding three dimensional 3D modelling and structuring The realization of true 3D geoinformation spatial systems requires a high input and the developmental process is taking place in various research centers and universities around the globe The development of such systems and solutions including the modelling theories are presented in this book

Digital Interactive TV and Metadata Arthur Lugmayr, Samuli Niiranen, Seppo Kalli, 2013-03-09 Recent years have brought many changes to the world of mass media The Internet and mobile communications technology have provided consumers with interactive digital services Television is catching up with this trend through the digitalization process Digital television is a hybrid platform combining elements from classical analog television and the Internet providing modern multimedia services on a familiar platform In short digital TV is a gateway to the world of interactive digital media Digital TV brings consumers into the television service arena and offers them new degrees of freedom However as the service and multimedia content types diversify and the services and their content increase television is facing many of the same challenges of complexity and information overflow faced by other digital media Metadata can handle the diverse services and content of digital TV efficiently and in a consumer friendly way Metadata means that the data are accompanied by other data which describe them As data about data meta data can provide an insight into syntactically and semantically complex data by distilling their essence to a set of simple descriptors Metadata also helps to structure and manage information in diverse settings The use of metadata in broadcast multimedia should not

be restricted to being merely a tool for coping with the challenges of a complex networked multimedia environment. Instead, metadata offers new opportunities for the development of innovative services.
