Vitalizing Nature In The Enlightenment Vitalizing Nature In The Enlightenment:

Vitalizing Nature in the Enlightenment Peter H. Reill, 2013 **Vitalizing Nature in the Enlightenment** Peter Hanns Reill, 2005 His sophisticated analysis ultimately questions postmodern narratives of a monolithic Enlightenment characterized by the dominance of instrumental reason that has led to many of the disasters of modern life Jacket

Jonathan Edwards's Philosophy of Nature Avihu Zakai, 2010-05-20 Jonathan Edwards's Philosophy of Nature The Re-Enchantment of the World in the Age of Scientific Reasoning analyses the works of Jonathan Edwards 1703-1758 on natural philosophy in a series of contexts within which they may best be explored and understood Its aim is to place Edwards's writings on natural philosophy in the broad historical theological and scientific context of a wide variety of religious responses to the rise of modern science in the early modern period John Donne's reaction to the new astronomical philosophy of Copernicus Kepler and Galileo as well as to Francis Bacon's new natural philosophy Blaise Pascal's response to Descartes' mechanical philosophy the reactions to Newtonian science and finally Jonathan Edwards's response to the scientific culture and imagination of his time

Re-Imagining Nature Alister E. McGrath, 2016-08-01 Reimagining Nature is a new introduction to the fast developing area of natural theology written by one of the world's leading theologians The text engages in serious theological dialogue whilst looking at how past developments might illuminate and inform theory and practice in the present This text sets out to explore what a properly Christian approach to natural theology might look like and how this relates to alternative interpretations of our experience of the natural world Alister McGrath is ideally placed to write the book as one of the world's best known theologians and a chief proponent of natural theology This new work offers an account of the development of natural theology throughout history and informs of its likely contribution in the present This feeds in current debates about the relationship between science and religion and religion and the humanities Engages in serious theological dialogue primarily with Augustine Aquinas Barth and Brunner and includes the work of natural scientists philosophers of science and poets

Sublime Dreams of Living Machines Minsoo Kang, 2011-02-14 From the dawn of European civilization to the twentieth century the automaton better known today as the robot has captured the Western imagination and provided a vital lens into the nature of humanity Historian Minsoo Kang argues that to properly understand the human as machine and the human as fundamentally different from machine we must trace the origins of these ideas and examine how they were transformed by intellectual cultural and artistic appearances of the automaton throughout the history of the West Kang tracks the first appearance of the automaton in ancient myths through the medieval and Renaissance periods marks the proliferation of the automaton as a central intellectual concept in the Scientific Revolution and the subsequent backlash during the Enlightenment and details appearances in Romantic literature and the introduction of the living machine in the Industrial Age He concludes with a reflection on the destructive confrontation between humanity and machinery in the modern era and the reverberations of the humanity machinery theme today Sublime Dreams of Living

Machines is an ambitious historical exploration and at heart an attempt to fully elucidate the rich and varied ways we have utilized our most uncanny creations to explore essential questions about ourselves

The Natural Laws of Plot Yoon Sun Lee, 2022-10-11 Is plot a line an arc or a shape None of these Rather than thinking of plot as a sequence of events or actions put into place solely through human agency against the backdrop of setting this book questions why we should distinguish between plot and setting and indeed whether we can make such a distinction After all plot Yoon Sun Lee contends cannot be disentangled from the material setting in which it takes place In *The Natural Laws of Plot* Lee connects the history of the novel and the history of science to show how plot in the realist novel is given shape by the characteristics of the physical world and how in turn plot serves as the avenue through which the realist novel participates in the same lines of inquiry about the world as pursued by the natural and physical sciences Lee argues that the novel emerges and evolves in tandem with the development of scientific practices and concepts in eighteenth and nineteenth century Europe to investigate the idea of a unified and objective world Drawing on readings from Defoe Austen Scott and many others Lee demonstrates how bodies human and non human behave according to laws that are built into worlds by plot and how they are subject to causes and consequences that can occur independently of individual action social forces or metaphysical destiny This interest in representing and exploring how things happen sets the novel apart from other literary genres and makes the history of science integral to the understanding of the history and theory of the novel and of narrative Plot Lee shows us is immersive and powerful because it satisfies our wish to know how things happen in a coherent objective and possibly real world

The Gestation of German Biology John H. Zammito, 2017-12-18 The emergence of biology as a distinct science in the eighteenth century has long been a subject of scholarly controversy Michel Foucault on the one hand argued that its appearance only after 1800 represented a fundamental rupture with the natural history that preceded it marking the beginnings of modernity Ernst Mayr on the other hand insisted that even the word biology was unclear in its meaning as late as 1800 and that the field itself was essentially prospective well into the 1800s In *The Gestation of German Biology* historian of ideas John Zammito presents a different version of the emergence of the field one that takes on both Foucault and Mayr and emphasizes the scientific progress throughout the eighteenth century that led to the recognition of the need for a special science The embrace of the term biology around 1800 Zammito shows was the culmination of a convergence between natural history and human physiology that led to the development of comparative physiology and morphology the foundations of biology

Magisterial in scope Zammito's book offers nothing less than a revisionist history of the field with which anyone interested in the origins of biology will have to contend
