Self-organization in the Evolution of Speech Pierre-Yves Oudeyer,2006 Speech is the principal supporting medium of language In this book Pierre Yves Oudeyer considers how spoken language first emerged He presents an original and integrated view of the interactions between self organization and natural selection reformulates questions about the origins of speech and puts forward what at first sight appears to be a startling proposal that speech can be spontaneously generated by the coupling of evolutionarily simple neural structures connecting perception and production He explores this hypothesis by constructing a computational system to model the effects of linking auditory and vocal motor neural nets He shows that a population of agents which used holistic and unarticulated vocalizations at the outset are inexorably led to a state in which their vocalizations have become discrete combinatorial and categorized in the same way by all group members Furthermore the simple syntactic rules that have emerged to regulate the combinations of sounds exhibit the fundamental properties of modern human speech systems This original and fascinating account will interest all those interested in the evolution of speech
