Writing Training Materials That Work How To Train Anyone To Do Anything:

Writing Training Materials That Work Wellesley R. Foshay, Kenneth H. Silber, Michael Stelnicki, 2003-02-03 Writing Training Materials that Work is a solid and practical resource to move our field to a more professional level of practice in which instructional decisions are based on research and valid models of how people learn Ruth Clark president Clark Training and Consulting past president ISPI I can see how this book will be immediately useful to my students In fact I can see how it will be immediately useful to me Thanks for putting it all together between two covers Allison Rossett professor San Diego State University The explosion of e learning has attracted huge numbers of practitioners to the field of instructional design ID many with little or no actual ID training And most current texts fail to cover the substantial recent developments in the field Writing Training Materials that Work is different In it the authors identify synthesize and summarize the most current best practices in ID They offer new ways of teaching declarative knowledge facts concepts and principles and well to ill structured procedural knowledge problem solving Their recommendations are based on those principles in the cognitive learning and instruction literature that are internally consistent prescriptive and have been empirically demonstrated to make a cost effective difference The authors approach is easy to implement and consistently gets results because it focuses on teaching deep understanding and problem solving allowing learners to generalize and transfer learning to new situations without re training Whether you re an experienced instructional design practitioner who wants to expand your skills or a graduate student in an advanced instructional design course Writing Training Materials T that Work will prove to be a readable usable and indispensable guide [Writing Training Materials That Work](#)

Foshay, 2003-06-01 **From Principles of Learning to Strategies for Instruction-with Workbook Companion** Robert J. Seidel, Kathy C. Perencevich, Allyson L. Kett, 2007-09-23 From Principles of Learning to Strategies for Instruction Part One The purpose of this book is to help educators and training developers to improve the quality of their instruction Unlike other available works the text is not limited to a particular theoretical position Nor is it like many of the instructional design texts which ignore the learning literature Rather it draws upon any and all of those research based principles regardless of learning theory which suggest heuristics to guide instructional strategies The approach of the authors is unique in that they develop a framework or model taxonomy for tasks through which the principles of learning can be related to particular learning processes suggesting distinctive strategies for specific instructional tasks The authors present a four stage model that includes acquisition automaticity near term transfer and far term transfer Workbook Companion Part Two In this Workbook Companion the strategies presented in the original book are expanded by supplying practical and specific strategies to implement of a variety of other subject matters These strategies are based on the needs which the authors currently see and cite in existing educational systems Each chapter concentrates on providing recommended instructional strategies and practical exercises for a specific target group high school age adolescents Contributors supply strategies in

the different learning domains including Cognitive Psychomotor Affect and Interpersonal and each individual is responsible for training teachers developing and or evaluating curricula for such training and educating high school students through the development and implementation of curricula Developed for both new and experienced teachers developing curricula for high school adolescents the goal of the Workbook Companion is to provide those in the field of education with strategies to incorporate each of the four domains into their lesson plans regardless of subject area

From Principles of Learning to Strategies for Instruction Robert J. Seidel, Kathleen C. Perencevich, Allyson L. Kett, 2006-05-28 The primary goal of instructional design is improving the quality of learning and instruction Instructional designers have focused on a number of areas of critical concern and developed a variety of techniques to achieve this goal Reigeluth 1983 1999 Critical areas of concern for those who plan implement and manage instruction include a needs assessment identifying gaps or deficiencies in knowledge and performance to be addressed in instruction b task analysis identifying the types of knowledge skills and attitudes to be developed during instruction c learner analysis determining who the learners are what they know relevant differences etc d instructional strategies developing strategies appropriate for the task and learners involved and e assessment and evaluation determining how to assess individual progress and evaluate programs There are many books already in print that treat the general domain of instructional design as well as texts that target each of these areas of concerns Why then another book on these issues There are several answers to this question Many of the available books treat instruction as a formal process that proceeds according to specific and detailed instructional systems development models see for example Dick Carey Carey 2005 Indeed the US military has created a series of handbooks specifying details of the various instructional development processes see Department of Defense 1999
