Today enterprises generate huge volumes of data. In recent years, Hadoop has been used for massive data storage and efficient distributed processing of data. The Yet Another Resource Negotiator (YARN) framework solves the design problems related to resource management faced by the Hadoop 1.x framework by providing a more scalable, efficient, flexible and highly available resource management framework for distributed data processing. The book explains Hadoop YARN commands and the configurations of components and explores topics such as High Availability, Resource Localization and Log aggregation.
