

GENERAL DESCRIPTION

The engine is a 90° "V" 6 cylinder 3.8 litre (3.79 lcc) . Each camshaft is supported by 4 journals and operate two valves per cylinder, that is 6 valves per head.

The cylinder block made of cast iron, with standard bore of 96.52mm and a stroke of 86.36mm, with a 9.35:1 compression ratio.

The cylinder numbering is as illustrated, from the front of the engine, left side 1-3-5 and right side 2-4-6. Firing order is 1-6-5-4-3-2. Four main bearings support the crankshaft.

The engine has two aluminium heads with a fuel injector for each cylinder which is incorporated into the heads.

ENGINE SERIAL NUMBER

Engine No. Location: On left-hand side engine block casting, at the front below and behind the water pump outlet.

MAINTENANCE HINTS

1.(a) When any internal engine parts are serviced, care and cleanliness are important.

(b) An engine is a combination of many machined, honed, polished and lapped surfaces with tolerances that are measured in thousandths of a millimetre.

(c) Friction areas should be coated liberally with engine oil during assembly to protect and lubricate the surfaces on initial operation.

(d) Proper cleaning and protection of machined surfaces and friction areas is part of the repair procedure and is considered standard workshop practice.

2. When valve train components are removed for service, they should be kept in order and should be installed in the same locations (with the same mating surfaces) as when removed.

3. Battery terminals should be disconnected before any major work is begun. If not, damage to wiring harnesses or other electrical components could result.

4. When raising or supporting the engine for any reason, do

not use a jack under the oil pan. There are small clearances between the oil pan and the suction pipe screen, so jacking may cause the oil pan to be bent against the screen, with damage being done to the oil suction pipe assembly.

5. If the air flow ducting is removed or disconnected, the intake opening should be covered to avoid accidental entrance of foreign material (which could follow the intake passage into a cylinder and cause extensive damage when the engine is started).

GENERAL MAINTENANCE

CHECKING ENGINE OIL PRESSURE

1. With engine at operating temperature and disconnect wiring harness connector from oil pressure sender unit.

2. Loosen and remove oil pressure sender unit from oil filter adaptor.

3. Install a suitable oil pressure gauge assembly into oil filter adaptor oil pressure sender unit hole.

4. Start engine and check oil pressure reading with engine running under no load.

Oil pressure@1850 rpm plus: 375kPa(min).

5.(a) After completing test, apply LOCTITE 242 sealant or equivalent to sender unit threads.

(b) Install and torque sender unit.

Oil Pressure Sender Unit

Torque: 12-14 Nm.

(c) Install wiring harness connector, start engine and check for oil leaks.

OIL FILTER

* The oil filter should be replaced every 10,000 Kilometres or 6 months whichever ever occurs first, or when the engine oil is contaminated in any way.

Replacement

1. Unscrew oil filter with a suitable oil filter wrench, then remove and discard.

2. (a) Make sure seal is placed correctly in recess in new filter.
