Improving Working Memory in Learning and Intellectual Disabilities Silvia Lanfranchi, Barbara Carretti, 2016-08-05 The last forty years of research have demonstrated that working memory WM is a key concept for understanding higher order cognition To give an example WM is involved in reading comprehension problem solving and reasoning but also in a number of everyday life activities It has a clear role in the case of atypical development too For instance numerous studies have shown an impairment in WM in individuals with learning disabilities LD or intellectual disabilities ID and several researchers have hypothesized

that this can be linked to their difficulties in learning cognition and everyday life The latest challenge in the field concerns the trainability of WM If it is a construct central to our understanding of cognition in typical and atypical development then specific intervention to sustain WM performance might also promote changes in cognitive processes associated with WM The idea that WM can be modified is debated however partly because of the theoretical implications of this view and partly due to the generally contradictory results obtained so far In fact most studies converge in demonstrating specific effects of WM training i e improvements in the trained tasks but few transfer effects to allied cognitive processes are generally reported It is worth noting that any maintenance effects when investigated are even more meagre In addition a number of methodological concerns have been raised in relation to the use of 1 single tasks to assess the effects of a training program 2 WM tasks differing from those used in the training to assess the effects of WM training and 3 passive control groups These and other crucial issues have so far prevented any conclusions from being drawn on the efficacy of WM training Bearing in mind that the opportunity to train WM could have a huge impact in the educational and clinical settings it seems fundamentally important to shed more light on the limits and potential of this line of research The aim of the research discussed here is to generate new evidence on the feasibility of training WM in individuals with LD and ID There are several questions that could be raised in this field For a start can WM be trained in this population Are there some aspects of WM that can be trained more easily than others Can a WM training reduce the impact of LD and ID on learning outcomes and on everyday living What kind of training program is best suited to the promotion of such changes

Developmental Disorders and Interventions ,2010-11-26 Volume 39 of the Advances in Child Development and Behavior series is concerned with Developmental Disorders and Interventions This volume provides an overview of contemporary research into cognitive neurodevelopmental and genetic disorders of learning The social emotional and cognitive functioning of children with William s syndrome Down syndrome Fragile X and autism reading difficulties mathematical difficulties and working memory problems are discussed by some of the leading researchers in the field Within each chapter the authors consider current interventions and methods for remediating difficulties associated with each disorder which will be of particular interest to clinical and educational practitioners Goes in depth to address contemporary research into neurodevelopmental and genetic disorders of learning A necessary resource for both psychology researchers and students The authors are either leaders in their chosen fields or have worked in some of the leading research teams in the world This volume covers a broad range of developmental disorders of learning from genetic disorders such as Down syndrome to cognitive problems such as poor working memory function The focus on interventions within each chapter will be of particular interest both to academics and clinical and educational practitioners

Understanding Working Memory Tracy Packiam Alloway, Ross G. Alloway, 2014-10-27 It is hard to conceive of a classroom activity that does not involve working memory our ability to work with information In fact it would be impossible for students to learn without working memory From following instructions to reading a sentence from sounding out an unfamiliar word to calculating a math problem nearly everything a student does in the classroom requires working with information Even when a student is asked to do something simple like take out their science book and open it to page 289 they have to use their working memory Most children have a working memory that is strong enough to quickly find the book and open to the correct page but some don't approximately 10% in any classroom A student who loses focus and often daydreams may fall in this 10% A student who isn't living up to their potential may fall in this 10% A student who may seem unmotivated may fall in this 10% In the past many of these students would have languished at the bottom of the class because their problems seemed insurmountable and a standard remedy like extra tuition didn't solve them But emerging evidence shows that many of these children can improve their performance by focusing on their working memory Working memory is a foundational skill in the classroom and when properly supported it can often turn around a struggling student's prospects This book will make sure you are able to spot problems early work with children to improve their working memory and ensure they reach their full potential How does the book work Each of the following chapters includes a description of the learning difficulty WHAT followed by an inside look

into the brain of a student with the disorder WHERE their unique working memory profile WHY and classroom strategies to support working memory HOW There are two types of strategies general working memory strategies that can be applied to all students in your class and specific working memory strategies for each learning difficulty The final chapter Chapter 9 provides the student with tools to empower them along their learning journey The aim in supporting students with learning difficulties is not just to help them survive in the classroom but to thrive as well The strategies in the book can provide scaffolding and support that will unlock their working memory potential to boost learning They are designed to be easily integrated within the classroom setting as a dimension of an inclusive curriculum and used in developing an individualized education program IEP for the student The strategies recommended here can also complement existing programs that support a core deficit such as a social skills program for a student with autistic spectrum disorder or behavior modification for those with ADHD Each chapter also includes Try It box Provides the reader with an opportunity to have a hands on understanding of the material Science Flash box Gives the reader a snapshot of current and interesting research related to each chapter Current Debate box Discusses a controversial issue pertaining to the disorder Tracy Packiam Alloway is an award winning psychologist based at the University of North Florida Ross Alloway is the CEO of Memosyne Ltd a company that brings cutting edge scientific research to parents
