Value-Stream Mapping Workshop Participant Guide Mike Rother, John Shook, 2019-06-18 **VSM Office**

Workflow: Participant Workbook ENNA, 2023-05-31 The VSM Office Participant Workbook is designed to be used during the Value Stream Mapping Office Workshop. This workbook systematically follows the trainer through the presentation and workshop. The workbook should be personalized and retained by each participant for continued reference after the training is finished.

Leveraging Digital Mixed Model Value Stream Maps Girish Hidaduggi, Jon Fournier, Herman Ranpuria, Dilesh Patel, 2025-04-16 This guide serves as a roadmap for integrating digital value stream mapping eVSM into your Lean deployment to improve production processes. Lean with its mapping component value stream mapping VSM has endured as a process improvement methodology for more than 25 years. VSM is a metrics-based analytical mapping method with simple calculations for Lean metrics such as Takt Time, VA, NVA, Capacity, OEE, etc. However, the calculations and charting associated with value stream maps can be tedious. It's hard to keep updating the calculations for what-if studies. Manual calculations can be prone to error. Digital VSM was introduced as a complement to the initial paper and pencil map. The eVSM software has been used to create Digital VSMs for many years, but it has also encountered a couple of hurdles. Lean application has expanded and is applied to increasingly complex value streams. Product variants, mixed models have proliferated so that many variants are now made with shared resources. Creating and analyzing mixed model value stream maps with only paper and pencil, however, is practically unfeasible. The eVSM program has been revamped for the mixed model production setting and is now accessible as eVSM Mix for creating and analyzing Digital Mix VSMs. The eVSM Mix software reintroduces VSM as a fundamental tool for lean practitioners working in mixed model situations. This guide illustrates Digital Mix VSMs created with the eVSM Mix software, shows how to use them analytically for what-if studies, and highlights best practices for deployment.

The Field Guide to Rapid Process Improvement

Workshops in Healthcare Cameron Stark, Gavin Hookway, Gill McVicar, Hugo Van Woerden, 2023-10-11 This book takes the reader through the process to plan, deliver, and follow up a weeklong Lean Quality Improvement event, usually termed a Rapid Improvement Event or Rapid Process Improvement Workshop (RPIW). Drawing on the experience of conducting over 100 of these workshops, the book gives readers the information to plan and run their own event. It describes how RPIWs fit in to wider improvement processes and how the reader can maximize these processes in their own organization. These weeklong improvement events are popular in health and social care, but there are no textbooks available to support them. There are several books that describe the use of shorter Kaizen events in health care, but none that describe the process of delivering weeklong events. The events have a rhythm specific to the one-week format, and the book seeks to help people to make use of best practice and to avoid common problems. Based on the experiences of the authors, this book includes an introduction to Lean concepts linked to the relevant part of the process, description, examples, and templates of forms that can be used in

ENNA.,2017 **The Experience of Participants in Value Stream Mapping Workshops** Todd J. Bille,2014 This study used grounded theory methodology to capture and describe the experience of value stream mapping workshop participants Value stream mapping is a methodology used in quality improvement and Lean transformation projects to analyze and improve a process On the basis of the research the author proposes a model describing the participants experience a Leadership demonstrated through communications commitment of resources and nurturing a supportive culture is vitally important from inception through the completion of value stream mapping b In a team environment c an intense interaction communications and knowledge sharing among participants creates a learning process that shifts participants focus from working in the process to working on the process d This shift of focus re frames participants understanding of the process providing participants a global understanding gestalt of the process which is carried into the creation of the future state Participants are cognizant of how change affects everyone s work e Psychological ownership arises as participants develop a new future state As this ownership grows motivation increases as the participants realize their goal of a new future state process The author concludes that value stream mapping is a transformational methodology that engages people amplifying their knowledge about the process they examine As participants create a new future state their motivation morale and performance are all enhanced while achieving the goals of the organization The author proposed a model directions for future research and practical managerial implications Office Workflow VSM ENNA.,2017-03-21 The Value Stream Mapping Facilitator Guide provides the structure needed to help guide the Facilitator through the VSM Office process It is designed to let you communicate and lead the process of developing your Current and Future State Maps This allows you to perform your workshops with confidence and lead change internally **Vsm** Enna,2017-03-21 ofValue Stream Mapping is used for the documentation and analysis of the flow of materials and information which bring a product or service to market Covering the foundational elements and outlining how to properly Value Stream Map the VSM Training Package is the most effective and powerful way to first understand and document then improve your workplace This comprehensive training package is action oriented to ensure successful learning and facilitate the communication of Value Stream Mapping Principles Untangling with Value Stream Mapping Ovidiu Contrás,2022-04-05 The standard belief in books about Lean initiatives and value stream mapping VSM is that VSM works well on transactional processes which are primarily linear processes where handoffs are well defined and the outcome is known and it is useful for repetitive projects or products This book counters these statements by clearly demonstrating how a VSM exercise can be successfully performed in complex multifunctional environments involving nonrepetitive work such as aircraft new product development custom engineering software development and project management The methodology described in this book is the result of more than ten years of refinement and is based on practice while working with multidisciplinary teams and helping them achieve their goals This is a novel approach to capturing the information flow in a VSM by recognizing it as the place where most of the issues are

generated especially for the previously mentioned environments and the fact that classical mapping methodologies including classical VSM do not capture it well The VSM methodology that the author developed goes to the essence of a VSM activities flow information flow timeline uses conventional VSM icons and some custom information flow icons and helps the following Quantifying waste VSM literature gap Making disconnects visible VSM literature gap Making behavioral and cultural patterns visible VSM literature gap If the steps are followed thoroughly then lead time reductions ranging from 60% to 88% are achieved along with increased availability of resources more output with the same resources projects delivered on time and most importantly colleagues embracing the Lean mindset which greatly contributes to maintaining the gains Essentially this book helps readers perform a VSM in environments where multiple stakeholders interact with each other to deliver a product or a service with unclear aspects such as what the product service is how all involved can contribute to the product or service transformation and how the interactions between them occur For example the products services targeted in this book include test results analysis results a custom design a process a methodology an engineering change integrated enterprise software and engineering drawings Concurrently this book helps readers map behavioral patterns such as micromanagement and company culture aspects such as excessive governance and decisions by committee

How to build a value stream mapping (VSM) Mickaël Réquillard, 2020-07-27 Lean management appeared in the 1950s and is now deployed not only in production activities but also in a multitude of functions Its main objective is to eliminate all process waste in order to improve process performance and meet the right customer needs by allocating company resources wisely A multitude of continuous improvement tools are available to achieve this goal including VSM Value Stream Mapping This tool which may seem complex the first time around is an excellent way to analyse a process identify how it works detailing both physical and information flows and highlight losses Once you have acquired the various notions specific to this method which we will detail in this book it becomes an excellent means of communication visual at any level in the company It allows to define the improvements and the strategy for the months or even years to come It allows decision makers to take a real overview of the situation This book will allow you to Understand the terms used in a VSM Understand when to use it and the benefits of this method Know how to read a VSM by understanding its logic symbols and formalisms Know how to represent a current VSM and design a future VSM Understand how to calculate key indicators Put into practice through several examples Enjoy reading
