Prothero, 2015-08-25 Every fossil tells a story Best selling paleontology author Donald R Prothero describes twenty five famous beautifully preserved fossils in a gripping scientific history of life on Earth Recounting the adventures behind the discovery of these objects and fully interpreting their significance within the larger fossil record Prothero creates a riveting history of life on our planet The twenty five fossils portrayed in this book catch animals in their evolutionary splendor as they transition from one kind of organism to another We witness extinct plants and animals of microscopic and immense size and thrilling diversity We learn about fantastic land and sea creatures that have no match in nature today Along the way we encounter such fascinating fossils as the earliest trilobite Olenellus the giant shark Carcharocles the fish-like Tiktaalik the Frogmaw and the Turtle on the Half Shell enormous marine reptiles and the biggest dinosaurs known the first bird Archaeopteryx the walking whale Ambulocetus the gigantic hornless rhinoceros Paraceratherium the largest land mammal that ever lived and the Australopithecus nicknamed Lucy the oldest human skeleton We meet the scientists and adventurers who pioneered paleontology and learn about the larger intellectual and social contexts in which their discoveries were made Finally we find out where to see these splendid fossils in the world's great museums Ideal for all who love prehistoric landscapes and delight in the history of science this book makes a treasured addition to any bookshelf stoking curiosity in the evolution of life on Earth *Second Genesis, A: Stepping-stones Towards The Intelligibility Of Nature* Julian Chela-flores, 2008-12-29 A Second Genesis enquires why nature is intelligible The fast growth of technology and deeper understanding of the humanities have provided significant clues Answering the question why nature can be understood requires an introduction to the new science of astrobiology and the exploration of the Solar System A careful discussion of a second Genesis is presented namely our present awareness that life may have emerged on other worlds Writing this volume has been motivated by the need to encourage a constructive dialogue

between science and faith Such an objective for a new book is timely since science is inserted with well defined frontiers in the context of human culture Similarly the frontiers of faith do not require religion to justify itself in scientific terms avoiding current unnecessary controversies This book intends to engage readers interested in the position of humans in nature It makes a serious effort to avoid demanding detailed knowledge of science philosophy or theology but will require some careful reading and meditation
