

Surface Weather Map Showing Storm System in the Eastern United States

Figure 2. Simplified surface weather map showing a storm system in the eastern US.

Warm air advection occurs where the wind flows across isotherms from higher pressure (closer to lower latitude) values. Thus, warm air is being transported towards a low-pressure system by the prevailing winds. Based on this fact alone, one would expect precipitation at that location to be rising. Cold air advection occurs where the wind flows across the isotherms from lower (colder) values to higher (warmer) values. Thus, colder air being transported by the wind to a warmer location produces falling temperatures.

Based on wind directions and the isotherm pattern on the Figure 2 map, determine the type of air advection (warm or cold) that would be occurring at each station.

3. Winds at station two are occurring at Station _____.

- ☐ A
☐ B
☐ C
☐ D

4. Cold air advection was occurring at Station _____.

- ☐ B
☐ C
☐ D

5. Generalizing from the map depiction of wind and temperature patterns associated with weather systems, what is the most likely weather expected at Station _____?

- ☐ warm
☐ cold

6. Most likely, where on the west end boundary of Low can be expected to have _____ air advection.

- ☐ warm
☐ cold

7. Areas to the east of High can be expected to have _____ air advection.

- ☐ warm
☐ cold

8. And while you choose from that category, weather based on the model of a high, areas to the east of High should have _____ air advection.

- ☐ warm

Nature-based Solutions for Resilient Ecosystems and Societies Shalini Dhyani, Anil Kumar Gupta, Madhav Karki, 2020-07-07 Over the past few decades the frequency and severity of natural and human induced disasters have increased across Asia. These disasters lead to substantial loss of life, livelihoods and community assets which not only threatens the pace of socio-economic development but also undo hard-earned gains. Extreme events and disasters such as floods, droughts, heat, fire, cyclones and tidal surges are known to be exacerbated by environmental changes including climate change, land use changes and natural resource degradation. Increasing climate variability and multi-dimensional vulnerabilities have severely affected the social, ecological and economic capacities of the people in the region who are economically speaking those with the least capacity to adapt. Climatic and other environmental hazards and anthropogenic risks coupled with weak and wavering capacities severely impact the ecosystems and Nature's Contributions to People (NCP) and thereby to human well-being. Long-term resilience building through disaster risk reduction and integrated adaptive climate planning therefore has become a key priority for scientists and policymakers alike. Nature-based Solutions (NbS) is a cost-effective approach that utilizes ecosystem and biodiversity services for disaster risk reduction and climate change adaptation while also providing a range of co-benefits like sustainable livelihoods and food, water and energy security. This book discusses the concept of Nature-based Solutions (NbS) both as a science and as art and elaborates on how it can be applied to develop healthy and resilient ecosystems locally, nationally, regionally and globally. The book covers illustrative methods and tools adopted for applying NbS in different countries. The authors discuss NbS applications and challenges, research trends and future insights that have wider regional and global relevance. The aspects covered include landscape restoration, ecosystem-based adaptation, ecosystem-based disaster risk reduction, ecological restoration, ecosystem-based protected areas management, green infrastructure development, nature-friendly infrastructure development in various ecosystem types, agro-climatic zones and watersheds. The book offers insights into understanding the sustainable development goals (SDGs) at the grass roots level and can help indigenous and local communities harness ecosystem services to help achieve them. It offers a unique essential resource for researchers, students, corporations, administrators and policymakers working in the fields of the environment, geography, development, policy, planning, the natural sciences, life sciences, agriculture, health, climate change and disaster studies.
