Cafeo, 2010-03-11 7 1 1 Background Uncertainty can be considered as the lack of adequate information to make a decision It is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems In general certainty can be broadly classified into three types Bae et al 2004 Ha Rok 2004 Klir and Wierman 1998 Oberkampf and Helton 2002 Sentz 2002 The first one is aleatory uncertainty also referred to as stochastic uncertainty or inherent certainty it results from the fact that a system can behave in random ways For example the failure of an engine can be modeled as an aleatory uncertainty because the failure can occur at a random time One cannot predict exactly when the engine will fail even if a large quantity of failure data is gathered available The second one is epistemic uncertainty also known as subjective uncertainty or reducible certainty it is the uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process By gaining information about the system or environmental factors one can reduce the epistemic uncertainty For example a lack of experimental data to characterize new materials and processes leads to epistemic uncertainty **Web Data Mining** Bing Liu, 2007 This is the first book to provide such a comprehensive text on Web data mining The book brings together all the essential concepts and algorithms from related areas such as data mining machine learning and text processing to form an authoritative and coherent text **Text Data Mining** Chengqing Zong, Rui Xia, Jiajun Zhang, 2021-05-22 This book discusses various aspects of text data mining Unlike other books that focus on machine learning or databases it approaches text data mining from a natural language processing NLP perspective The book offers a detailed introduction to the fundamental theories and methods of text data mining ranging from pre processing for both Chinese and English texts text representation and feature selection to text classification and text clustering It also presents the predominant applications of text data mining for example topic modeling sentiment analysis and opinion mining topic detection and tracking information extraction and automatic text summarization Bringing all the related concepts and algorithms together it offers a comprehensive authoritative and coherent overview Written by three leading experts it is valuable both as a textbook and as a reference resource for students researchers and practitioners interested in text data mining It can also be used for classes on text data mining or NLP *WEBKDD 2002 - Mining Web Data for Discovering Usage Patterns and Profiles* Osmar R. Zaiane, Jaideep Srivastava, Myra Spiliopoulou, Brij Masand, 2003-10-02 1 Workshop Theme Data mining as a discipline aims to relate the analysis of large amounts of user data to shed light on key business questions Web usage mining in particular a relatively young discipline investigates methodologies and techniques that dress the unique challenges of discovering insights from Web usage data aiming to evaluate Web usability understand the interests and expectations of users and assess the effectiveness of content delivery The maturing and expanding Web presents a key driving force in the rapid growth of electronic commerce and a new channel for content providers Customized offers and content made possible by discovered knowledge about the

customer are fundamental for the establishment of viable e-commerce solutions and sustained and effective content delivery in noncommercial domains. Rich Web logs provide companies with data about their online visitors and prospective customers allowing microsegmentation and personalized interactions. While Web mining as a domain is several years old, the challenges that characterize data analysis in this area continue to be formidable. Though preprocessing data routinely takes up a major part of the effort in data mining, Web usage data presents further challenges based on the difficulties of assigning data streams to unique users and tracking them over time. New innovations are required to reliably reconstruct sessions to ascertain similarity and differences between sessions and to be able to segment online users into relevant groups.
