Fred Hoyle's Universe Jane Gregory, 2005-05-26 Fred Hoyle was one of the most widely acclaimed and colourful scientists of the twentieth century a down to earth Yorkshireman who combined a brilliant scientific mind with a relish for communication and controversy Best known for his steady state theory of cosmology he described a universe with both an infinite past and an infinite future He coined the phrase big bang to describe the main competing theory and sustained a long running sometimes ill tempered and typically public debate with his scientific rivals He showed how the elements are formed by nuclear reactions inside stars and explained how we are therefore all formed from stardust He also claimed that diseases fall from the sky attacked Darwinism and branded the famous fossil of the feathered Archaeopteryx a fake Throughout his career Hoyle played a major role in the popularization of science Through his radio broadcasts and his highly successful science fiction novels he became a household name though his outspokenness and support for increasingly outlandish causes later in life at times antagonized the scientific community Jane Gregory builds up a vivid picture of Hoyle s role in the ideas the organization and the

popularization of astronomy in post war Britain and provides a fascinating examination of the relationship between a maverick scientist the scientific establishment and the public Through the life of Hoyle this book chronicles the triumphs jealousies rewards and feuds of a rapidly developing scientific field in a narrative animated by a cast of colourful astronomers keeping secrets losing their tempers and building their careers here on Earth while contemplating the nature of the stars

The Oxford Guide to the History of Physics and Astronomy J. L. Astronomy and particle physics Great Britain: Parliament: House of Commons: Science and Technology Committee,2011-05-13 The Science and Technology Committee warns that the UK s prominence in astronomy and particle physics and its ability to attract and inspire the next generation of scientists in these areas could be at risk if reduced budgets hit the UK s growth prospects reputation and expertise Although science did relatively well in the recent Spending Review funding for astronomy sees a total reduction of 21% over the next four years compared with 2010 11 More starkly comparing 2014 15 with 2005 spending in astronomy and particle physics will be around 50% lower than its level six years ago This is worrying particularly when set against the planned increased investment in science and innovation by the UK s international peers as part of long term strategies to ensure economic growth The Science and Technology Facilities Council STFC the research council which funds research and facility development in astronomy particle physics and nuclear physics is risking the UK s ability to stay at the forefront of future developments by focusing its astronomy and particle physics programmes into fewer areas A case in point is the UK s planned withdrawal from all Northern Hemisphere optical and ground based astronomical facilities which could see UK leadership and competitive advantage being handed over to international peers The Committee is also highly critical of past STFC strategies especially its failure to incorporate into policy documents details of the planned withdrawals The report also addresses the future of the National Schools Observatory and outreach which is essential to inspire the next generation of scientists
