Sugar and Spice, and Everything Nice: Exploring Prosocial Development Through Infancy and Early Childhood Chris Moore, Markus Paulus, Amanda Williams, 2015-05-18 Prosocial behaviors such as sharing helping and comforting begin to emerge early in development The presence of these prosocial behaviors is important not only in childhood but throughout one s lifetime as behaving prosocially is important for social functioning and maintaining social relationships For many years researchers have been interested in how and when these behaviors develop as well as how these behaviors are influenced by a variety of factors Recently however exciting new research has shown novel and surprising findings particularly on the early development and ontogenetic origins of prosocial behavior Research in this area is important as by understanding what influences prosocial behavior we may be better able to sustain and support the development of prosociality Further a richer understanding may help us to be better able to mediate factors that impede or negatively influence positive social behaviors as well as negate triggers that may lead to negative social behaviors Many theoretical views guide different streams of developmental research in this field Here we will bring together scholars from

various theoretical backgrounds to collectively explore the development of early prosocial behaviors from early infancy to early school aged children Contributors will offer insights using a variety of methodologies from various resource allocation paradigms derived from economist game theorists to looking time paradigms and more Together we seek to broadly explore questions pertaining to prosocial development for example at what age do prosocial behaviors moral understanding or social selectivity emerge Contributors will individually address unique research questions across a spectrum of topics For example how prosocial behaviors are influenced by underlying mechanisms such as moral emotions e g guilt and sympathy will be explored as will how children s expectations may shape their behaviors and how they come to care about others Questions surrounding different contexts will also be investigated For example how does empathy influence prosociality Do children treat partners differently depending on their past behaviors wealth or other characteristics Does whether there is a cost associated with behaving prosocially influence decision making By incorporating the work of numerous researchers in the field of prosocial development who contribute comprehensive reviews of past research unique theoretical perspectives and empirical approaches the proposed research topic endeavors to provide new insights into a breadth of prosocial behaviors In sum the proposed research topic will contribute to our understanding of prosocial development in the early years by highlighting the relevant factors and contexts under which prosocial behavior emerges
