

Summary the Wealth of Nation

By Adam Smith

Chapter 3 That the Division of Labor is Limited by the Extent of the Market

point: the more people a person can sell their wares to, the more specialized that person can afford to be. Some trades, Smith says, require a large population, while others can be conducted even in a small rural town. A village carpenter, for example, will have to do a little bit of everything—cabinetry, wheel-making, house-framing—whereas someone in a big city might be able to specialize in just one of those tasks. Adam Smith argues that the division of labor is limited by the extent of the market. He explains that the more extensive the market, the greater the division of labor can be. This is because a larger market allows for a greater variety of goods to be produced and exchanged, which in turn allows for a greater specialization of workers.

Since it is much cheaper to transport goods by water than by land, he adds, the size of any given market will be limited by its access to navigable rivers, canals, or a seacoast. In Smith's view the differences in such access largely explain the different rates of economic growth and technological progress in various parts of the world. Central Asia and the African interior, for example, remain "barbarous and uncivilized" because they have few navigable rivers and no coast. Eastern China, in contrast, is prosperous because its vast network of rivers allows for ample inland trade.

Smith also explains that the division of labor is constrained by the size of the market in terms of the size of the population and the proximity of the population. A larger population and greater proximity to other markets allows for a greater division of labor. Conversely, a smaller population or greater distance from other markets limits the division of labor.

In summary, Adam Smith argues that the division of labor is limited by the extent of the market, which is determined by the size of the population and the proximity to other markets. The larger the market, the greater the division of labor, and the greater the specialization of workers, which leads to increased efficiency, productivity and the wealth of the nation.

An analysis of this argument reveals that it is a reflection of the fact that the market is the driving force behind the division of labor and production. The greater the market demand, the greater the incentive for the division of labor and specialization, which in turn increases productivity and efficiency, resulting in greater wealth for the nation. Additionally, this argument highlights the importance of a well-functioning market and the impact of geographical factors on the economy.

The Wealth of Nations & The Theory of Moral Sentiments Adam Smith, 2017-12-06 The invisible hand of the market is a metaphor conceived by Adam Smith to describe the self regulating behavior of the marketplace The exact phrase is used just three times in Smith's writings but has come to capture his important claim that individuals' efforts to maximize their own gains in a free market benefits society even if the ambitious have no benevolent intentions Smith came up with the two meanings of the phrase from Richard Cantillon who developed both economic applications in his model of the isolated estate He first introduced the concept in *The Theory of Moral Sentiments* written in 1759 In this work however the idea of the market is not discussed and the word capitalism is never used By the time he wrote *The Wealth of Nations* in 1776 Smith had studied the economic models of the French Physiocrats for many years and in this work the invisible hand is more directly linked to the concept of the market specifically that it is competition between buyers and sellers that channels the profit motive of individuals on both sides of the transaction such that improved products are produced and at lower costs

Adam Smith 1723-1790 was a Scottish economist philosopher and author as well as a moral philosopher a pioneer of political economy and a key figure during the Scottish Enlightenment era Smith is best known for two classic works *The Theory of Moral Sentiments* 1759 and *An Inquiry into the Nature and Causes of the Wealth of Nations* 1776 The latter usually abbreviated as *The Wealth of Nations* is considered his magnum opus and the first modern work of economics
