Water, Ice & Stone Bill Green, 2020-07-07 John Burroughs Medal for Distinguished Natural History Book PEN Martha Albrand Award Finalist Green's prose rings with the elemental clarity of the ice he knows so well PEN Awards Committee citation A classic of contemporary nature writing the award winning *Water Ice Stone* is both a scientific and poetic journey into Antarctica addressing the ecological importance of the continent within the context of climate change Bill Green has been traveling to this remote and primordial place at the bottom of the Earth since 1968 With this book he focuses on the McMurdo Dry Valleys an area that is deceptively timeless as a stark landscape of rock and ice Here Green delves into the geochemistry of the region and discovers a wealth of data which vividly speaks to the health and climate of the larger world Bill Green is a geochemist and professor emeritus at Miami University in Oxford Ohio He first traveled to Antarctica in 1968 and began conducting research there in 1980 He is also the author of Boltzmann's Tomb *Travels in Search of Science*

The Transantarctic Mountains Gunter Faure, Teresa M. Mensing, 2010-09-21 This book presents a summary of the geology of the Transantarctic Mountains for Earth scientists who may want to work there or who need an overview of the geologic history of this region In addition the properties of the East Antarctic ice sheet and of the meteorites that accumulate on its surface are treated in separate chapters The presentation ends with the Cenozoic glaciation of the Transantarctic Mountains including the limnology and geochemical evolution of the saline lakes in the ice free valleys The subject matter in this book is presented in chronological order starting about 750 million years ago and continuing to the present time The chapters can be read selectively because the introduction to each chapter identifies the context that gives relevance to the subject matter to be discussed The text is richly illustrated with 330 original line drawings as well as with 182 color maps and photographs The book contains indexes of both subject matter and of authors names that allow it to be used as an encyclopedia of the Transantarctic Mountains and of the East Antarctic ice sheet Most of the chapters are supplemented by Appendices containing data tables additional explanations of certain phenomena e g the formation and seasonal destruction of stratospheric ozone and illustrative calculations e g ^{38}Cl dates of meteorites The authors have spent a combined total of fourteen field seasons between 1964 and 1995 doing geological research in the Transantarctic Mountains with logistical support by the US Antarctic Program Although Antarctica is remote and inaccessible tens of thousands of scientists of many nationalities and their assistants have worked there and even larger numbers of investigators will work there in the future
