

An aerial photograph showing a vast, flooded landscape. A wide, muddy river or floodplain dominates the scene, with several small, isolated islands of land. These islands are covered with green vegetation and some small, simple structures, possibly temporary shelters or small huts. A narrow, straight road or path cuts through the water, with a few vehicles and more structures visible along its length. The water is a murky, brownish-grey color, contrasting with the green of the land patches. The overall scene conveys a sense of environmental vulnerability and the impact of water on human settlements.

Water Resource Management In A Vulnerable World The Hydro Hazardscapes Of Climate Change:

Water Resource Management in a Vulnerable World Daanish Mustafa, 2012-11-12 Access to water and the threat of climate change are two of the most challenging issues for our planet. A global population now exceeding 7 billion people together with growing numbers of countries adopting a more water intensive lifestyle are placing increased demands upon the world's water resources whilst global climate change promises rising sea levels and increased flooding in some of the world's most densely populated regions. How are we to address the twin challenge of global water sufficiency and future climate change? Existing attempts to improve the management of local water resources and to alleviate the hazard of flooding have often fallen short of the desired result. Attempts by governments and NGOs to provide modern solutions for example have created unforeseen problems adversely affecting future water resources and leading to increased vulnerability to crises. Daanish Mustafa's important new book outlines the need to develop an integrative approach. He introduces the concept of hydro hazardscape to show how the diverse social groups affected by a hazard may view it differently with the result that their view of the potential threat may also differ. It is only by adopting an approach that is attentive to the complexities and multiple values of water in the communities affected that we may hope for any measure of success. Drawing upon a range of international examples from South Asia, Central America, the Caucasus and the USA at scales ranging from the local to basin wide the author shows how the hydro hazardscape approach will help negotiate not only the existing challenges of equity and environmental quality but also that of long term sustainability in a future filled with climate change. *Water Resources*
