Hydrosystems Engineering and Management Larry W. Mays, Yeou-Koung Tung, 2002 This book is intended to be a textbook for students of water resources engineering and management. It is an introduction to methods used in hydrosystems for upper level undergraduate and graduate students. The material can be presented to students with no background in operations research and with only an undergraduate background in hydrology and hydraulics. A major focus is to bring together the use of economics, operations research, probability and statistics with the use of hydrology, hydraulics and water resources for the analysis, design, operation and management of various types of water projects. This book is an excellent reference for engineers, water resource planners, water resource systems analysts and water managers. This book is concerned with the mathematical modeling of problems in water project design, analysis, operation and management. The quantitative methods include a) the simulation of various hydrologic and hydraulic processes b) the use of operations research, probability and statistics and economics. Rarely have these methods been integrated in a systematic framework in a single book like *Hydrosystems Engineering and Management*. An extensive number of example problems are presented for ease in understanding the material. In addition, a large number of end of chapter problems are provided for use in homework assignments.

Evolution of Water Supply Through the Millennia Andreas N. Angelakis,Larry W. Mays,Demetris Koutsoyiannis,Nikos Mamassis,2012-04-14 Evolution of Water Supply Through the Millennia presents the major achievements in the scientific fields of water supply technologies and management throughout the millennia It provides valuable insights into ancient water supply technologies with their apparent characteristics of durability adaptability to the environment and sustainability A comparison of the water technological developments in several civilizations is undertaken These technologies are the underpinning of modern

achievements in water engineering and management practices It is the best proof that the past is the key for the future Rapid technological progress in the twentieth century created a disregard for past water technologies that were considered to be far behind the present ones There are a great deal of unresolved problems related to the management principles such as the decentralization of the processes the durability of the water projects the cost effectiveness and sustainability issues such as protection from floods and droughts In the developing world such problems were intensified to an unprecedented degree Moreover new problems have arisen such as the contamination of surface and groundwater Naturally intensification of unresolved problems led societies to revisit the past and to reinvestigate the successful past achievements To their surprise those who attempted this retrospect based on archaeological historical and technical evidence were impressed by two things the similarity of principles with present ones and the advanced level of water engineering and management practices

Evolution of Water Supply Through the Millennia is intended for engineers in water resources companies hydraulic design companies and water Institutes It can be used for all courses related to water resources Authors Andreas N Angelakis Institute of Iraklion National Foundation for Agricultural Research N AG RE F Greece Larry W Mays School of Sustainable Engineering and the Built Environment Arizona State University USA Demetris Koutsoyiannis School of Civil Engineering National Technical University of Athens Greece Nikos Manassis School of Civil Engineering National Technical University of Athens Greece
