Number and Numbers Alain Badiou, 2018-05-18 The political regime of global capitalism reduces the world to an endless network of numbers within numbers but how many of us really understand what numbers are Without such an understanding how can we challenge the regime of number In *Number and Numbers* Alain Badiou offers an philosophically penetrating account with a powerful political subtext of the attempts that have been made over the last century to define the special status of number Badiou argues that number cannot be defined by the multiform calculative uses to which numbers are put nor is it exhausted by the various species described by number theory Drawing on the mathematical theory of surreal numbers he develops a unified theory of Number as a particular form of being an infinite expanse to which our access remains limited This understanding of Number as being harbours important philosophical truths about the structure of the world in which we live In Badiou's view only by rigorously thinking through Number can philosophy offer us some hope of breaking through the dense and apparently impenetrable capitalist fabric of numerical relations For this will finally allow us

to point to that which cannot be numbered the possibility of an event that would deliver us from our unthinking subordination of number *The new thinking with numbers, book C* Thomas George Foran,1954 **Thinking in numbers** Hunter Diack,1963 **The Math Gene** Keith Devlin,2001-05-17 If people are endowed with a number instinct similar to the language instinct as recent research suggests then why can't everyone do math In *The Math Gene* mathematician and popular writer Keith Devlin attacks both sides of this question Devlin offers a breathtakingly new theory of language development that describes how language evolved in two stages and how its main purpose was not communication Devlin goes on to show that the ability to think mathematically arose out of the same symbol manipulating ability that was so crucial to the very first emergence of true language Why then can't we do math as well as we speak The answer says Devlin is that we can and do we just don't recognize when we're using mathematical reasoning **Mathematical Thinking** Masami Isoda,2012 Developing mathematical thinking is one of major aims of mathematics education In mathematics education research there are a number of researches which describe what it is and how we can observe in experimental research However teachers have difficulties developing it in the classrooms This book is the result of lesson studies over the past 50 years It describes three perspectives of mathematical thinking Mathematical Attitude Minds set Mathematical Methods in General and Mathematical Ideas with Content and explains how to develop them in the classroom with illuminating examples

Constructing Number Anderson Norton, Martha W. Alibali, 2018-12-17 The book synergizes research on number across two disciplines mathematics education and psychology The underlying problem the book addresses is how the brain constructs number The opening chapter frames the problem in terms of children's activity including mental and physical actions Subsequent chapters are organized into sections that address specific domains of number natural numbers fractions and integers Chapters within each section address ways that children build upon biological primitives e.g. subitizing and prior constructs e.g. counting sequences to construct number The book relies on co-authored chapters and commentaries at the end of each section to create dialogue between junior faculty and senior researchers as well as between psychologists and mathematics educators The final chapter brings this work together around the framework of children's activity and additional themes that arise in the collective work The book is aimed to appeal to mathematics educators mathematics teacher educators mathematics education researchers educational psychologists cognitive psychologists and developmental
