Ignacio Martín-Baró

Treating Victims Of Torture And Violence Theoretical Cross Cultural And Clinical Implications:

Treating Victims of Torture and Violence Peter Elsass, 1997-11 Torture is among the most disturbing and psychologically devastating of human behaviors. It dehumanizes its victims, leaving them with serious and lasting psychological wounds. Like other psychological trauma, torture frequently leaves in its wake denial and silence among both perpetrators and their victims. This communicative void creates a public and mental block that can make treatment of torture survivors very difficult. *Treating Victims of Torture and Violence* is the definitive manual for therapists treating victims of torture, prisoners of war, and casualties of forced migration. Divided into five sections dealing with basic concepts of torture, violence, and aggression; the torture syndrome; psychotherapeutic treatment; the cultural psychology of torture syndrome; and cultural psychological treatment, *Treating Victims of Torture and Violence* employs both classic psychoanalytic and cognitive behavioral methods. Realizing that torture victims are frequently from different cultures than those of their therapists, Peter Elsass provides in depth aid to therapists dealing with a multicultural clientele.

Trauma Transformed Marian C. Bussey, Judith Bula Wise, 2007 Whether it's physical, psychological, social, historical, or ongoing trauma is a universal experience, and this book provides professionals with the approaches necessary for successful and empowering interventions across the trauma spectrum. Part one examines the steps individuals take to heal their traumas: Nicolas survives an attack by his own dog; Tay rebuilds her life after years of incest; Claire speaks out about being molested by a program participant at her mental health clinic; and Erma copes with the shattering memories of childhood abuse. Part two focuses on interpersonal dynamics: Frank is held accountable for his violence toward his wife Erin and her mother; confront the reality of bullying and victimization in schools; Beth faces discrimination because of her sexual orientation; and staff members at a transitional housing shelter deal with the death of a client. Part three recounts stories of resilience and healing at the social and community level: Salome and her family process the historical trauma of the massacre of her American Indian ancestors; a group of boys who became fatherless after 9/11 respond to experiential ways of coping with their grief; Jennifer and Kim live daily with the social trauma of poverty; Three Liberian families survive torture, flight, refugee camps, and resettlement; Amory struggles to find meaning and move on from his experience as a combat veteran; and the story of Angelina Batiste epitomizes the loss and resilience of those who lived through Hurricane Katrina. *Trauma Transformed* provides insight into the psychological and spiritual resources practitioners need to help victims move forward and improve upon their circumstances. Readers will also learn to strengthen their sense of self to prevent secondary trauma.

Displaced Shaifali Sandhya, 2024 Drawing on firsthand accounts and empirical research, as well as interviews with government officials, agency directors, and refugee camp managers, *Displaced* explores the psychological trauma of refugees and the complex interplay between trauma integration into host nations and the consequences of failing to attend to refugee mental health as part of comprehensive resettlement initiatives worldwide.

Transforming the Legacy Kathryn Karusaitis Basham, Dennis Miehl, 2004-10-27 To serve the

increasing numbers of individuals who have survived interpersonal and domestic violence or as refugees have sought asylum from political violence armed conflict or torture Transforming the Legacy presents an innovative relationship based and culturally informed couple therapy practice model that is grounded in a synthesis of psychological and social theories This unique couple therapy model encompasses three phases of clinical practice Phase I entails a process of establishing safety stabilization and a context for changing legacies of emotional sexual and or physical abuse Phase II guides reflection on the trauma narrative The goal of phase III is to consolidate new perspectives attitudes and behaviors Within these phases the model illustrated with rich case studies focuses on specific issues including intersubjectivity between the client and clinician such as transference and countertransference vicarious traumatization and racial identity development intrapersonal interactional and institutional factors the role of the victim victimizer bystander dynamic in the couple and therapeutic relationships preserving a locus of control with clients flexibility in decisionmaking regarding clinical processes and specific practice themes such as the composition of a couple the role of violence parenting sexuality affairs dual diagnoses and dissociation A dramatic departure from formulaic therapeutic approaches this biopsychosocial model emphasizes the crafting of specific treatment plans and specific clinical interventions to show how couple therapy can transform the legacies of childhood traumatic events for a wide range of populations including military couples and families gay lesbian bisexual transgendered couples and families and immigrant and refugee couples and families This thorough attention to issues of cultural diversity distinguish Transforming the Legacy from the current literature and make it an invaluable resource for clinicians in a wide range of professional disciplines

Trauma, Psychosis, and Posttraumatic Stress Disorder Kate V. Hardy, Kim T. Mueser, 2017-12-21 There is abundant evidence showing a strong association between trauma exposure psychotic symptoms and posttraumatic stress disorder PTSD Early trauma exposure contributes to the formation of psychotic symptoms and the development of psychotic disorders or severe mental illnesses such as schizophrenia bipolar disorder and treatment refractory major depression Furthermore among persons with psychotic disorders multiple traumatization over the lifetime is common due to factors such as social stigma the criminalization of severe mental illness and increased vulnerability to interpersonal victimization In addition to these factors is the traumatic nature of experiencing psychotic symptoms and coercive treatments such as involuntary hospitalization and being placed in seclusion or restraints Not surprisingly these high rates of trauma lead to high rates of PTSD in people with psychotic disorders which are associated with more severe symptoms worse functioning and greater use of acute care services In addition to the impact of trauma on the development of psychotic disorders and comorbid PTSD traumatic experiences such as childhood sexual and physical abuse can shape the nature of prominent psychotic symptoms such as the content of auditory hallucinations and delusional beliefs Additionally traumatic experiences have been implicated in the role of stress responsivity and increased risk for transition to psychosis in those identified as being at clinical high risk of developing psychosis Finally although the diagnostic criteria for PTSD primarily emphasize the effects of trauma on anxiety avoidance physiological over arousal and negative thoughts it is well established that PTSD is frequently accompanied by psychotic symptoms such as hallucinations and delusions that cannot be attributed to another DSM V Axis I disorder such as psychotic depression or schizophrenia Understanding the contribution of traumatic experiences to the etiology of psychosis and other symptoms can inform the provision of cognitive behavioral therapy for psychosis including the development of a shared formulation of the events leading up to the onset of the disorder as well as other trauma informed treatments that address distressing and disabling symptoms associated with trauma and psychosis Until recently the trauma treatment needs of this population have been neglected despite the high rates of trauma and PTSD in persons with psychotic disorders and in spite of substantial gains made in the treatment of PTSD in the general population Fortunately progress in recent years has provided encouraging evidence that PTSD can be effectively treated in people with psychotic disorders using interventions adapted from PTSD treatments developed for the general population In contrast to clinician fears about the untoward effects of trauma focused treatments on persons with a psychotic disorder research indicates that post traumatic disorders can be safely treated and that participants frequently experience symptom relief and improved functioning There is a need to develop a better understanding of the interface between trauma psychosis and post traumatic disorder This Frontiers Research Topic is devoted to research addressing this interface
