Treatment of Recurrent Depression John F. Greden, 2008-08-13 Based on powerful epidemiological data such as numbers afflicted mortality rates from suicide personal and familial consequences and skyrocketing fiscal costs major depressive disorder MDD has the sad and ignominious distinction of being a leader among disabling disorders worldwide With lifetime prevalence risks of 13% for men and 21% for women the magnitude of this crisis cannot be understated This hard hitting volume focuses on recurrences perhaps most important among the many factors others include extreme underdiagnosis and undertreatment genetic vulnerability frequent recurrences severe stigma and poor adherence with maintenance treatment and brain tissue degenerative changes associated with recurrences and chronic depression that contribute to MDD's high morbidity Following an introduction by the editor detailing the overwhelming personal and societal burden created by MDD the distinguished authors of this volume emphasize five critical topics The lifetime impact of gender on recurrent MDD in women emphasizing the clinical features treatment and prevention strategies of the illness during three key periods of hormone transition adolescence childbearing years and middle life and including recommendations on where future research should focus Treatment strategies for chronic and recurrent depression to help prevent acute episodes from developing into long term depression specifically addressing the continuing question of whether pharmacotherapy and psychotherapy combinations are superior to either alone Prevention of recurrences in bipolar patients updating the demonstrated benefits of several new anticonvulsant mood stabilizers and integrative treatment approaches and suggesting that treatment success depends on a multifaceted approach that combines old and new pharmacotherapy Potential applications of new somatic treatment strategies involving minimally invasive brain stimulation that have greatly reduced the stigma but done little to advance the diagnosis and treatment of neuropsychiatric illnesses with exciting data suggesting the efficacy of vagal nerve stimulation VNS and repetitive transcranial magnetic stimulation TMS A call to arms with updated recommendations on how to ensure demonstrable lasting progress in preventing recurrences of depression which along with other chronic diseases such as diabetes heart disease and schizophrenia progresses throughout life unless actively treated This highly informative volume clearly written and exceptionally well referenced is a must read for every clinician including specialists in depression and clinical neurosciences primary care physicians and mental health clinicians interested in learning more about how to successfully treat what remains one of our most recalcitrant debilitating illnesses

Clinical Trials in Psychopharmacology Marc Hertzman, Lawrence Adler, 2010-03-16 Although clinical trials were virtually unheard of in psychiatry for many years they are now the gold standard for judging whether drugs are safe and useful But should they be What is the true status of clinical trials Even when they ostensibly demonstrate a benefit of a certain treatment the strict patient selection criteria poor compliance and high drop out rate leave the conclusions open to question Are the new treatments really better or more cost effective than the old Do they have fewer side effects In this book the authors take a critical look at recent developments and present a series of trenchant and challenging observations Section I examines the significant changes in law and the regulatory environment that have occurred during the past ten years Has fossilization handicapped the US Food and Drug Administration in promoting treatment advances How can the plethora of findings be regulated This is particularly pertinent in genomic studies and there are two chapters addressing the impact of genomics on psychiatric research This section also addresses the role of women in drug trials a group long excluded but now demanding a part for without testing how can optimal treatments be devised The next two Sections highlight clinical trials in the major areas of psychiatric pharmacological treatment including Mood Disorders especially Bipolar Anxiety Disorders and addictions Chapters on pharmacological treatments for Eating Disorders Attention Deficit Disorder Autism and Asperger's Syndrome and Impulse Control Disorder represent the latest thinking on these subjects The final Section contains a consummate example of out of the Western box thinking namely consideration of herbal medicines used by a large number of patients with or without medical supervision We conclude with a close look at the problem of side effects then selected thoughts about methodology Clearly written the text provides immediate access to new developments across the spectrum of drug testing Clinical Trials in Psychopharmacology A Better Brain is provocative reading for psychiatrists pharmacologists and all those interested in improved drug treatments for patients with mental illness Raises questions about the conduct of trials and the credibility of their outcomes that are relevant not just in psychiatry but all areas of medicine Discusses the ethical problems in assessing outcomes in humans including children
