Topcon Total Station Manual 3b

Alan W. Roth

Topcon Total Station Manual 3b:

Seascape Ecology: from characterization to evaluation of state and change over time Monica Montefalcone, Carlo Nike Bianchi, 2023-08-22 Landscape ecology has been a discrete established discipline since at least 1980 Its marine counterpart seascape ecology is barely a decade old its first applications dating from the early 2010s Lack of perception of the marine environment hampers the adoption of many landscape ecology approaches to the sea Seascape ecology relies on special technologies such as remote sensing either acoustic or optical robotics and scuba diving Both disciplines deal with the spatial configuration of ecosystems and consider environmental heterogeneity and dynamics as the main subjects of study and the key for ecosystem functioning and persistence Seascape is here intended as the totality of natural and anthropogenic characters of a marine region To the geologist it is defined by sedimentology and underwater geomorphology to the biologist by the nature of the living cover of the seafloor to the ecologist by the relationships among functional processes and the spatial organization of ecosystems The goal of this research topic is to encourage original research case studies reviews and viewpoints to identify research priority gaps and possibly contribute to filling them in We will appreciate in particular manuscripts dealing with recent advances such as high resolution habitat mapping underwater soundscape and biophony development application and validation of biotic indices to assess seafloor integrity as requested for instance by recent European Directives Papers of interest may discuss the multivarious facets of stability and describe resistance and resilience patterns the role of stress and disturbance regime shift and phase shift or may take up the challenge of integrating coastal landscape and seascape analyses Studies of long term series are welcome as well as methodological improvements and macroecological approaches on the importance of species diversity and connectivity in seascape organization
