Topics In Varieties Of Group Representations Topics In Varieties Of Group Representations:

Topics in Varieties of Group Representations Samuel M. Vovsi, 1991-11-28 This book is devoted to the theory of group representations a young and promising area of modern algebra It provides a detailed exposition of several central topics in the field leading to the most current advances and developments Much of the included material has never been available in book form before It is intended for a broad audience of researchers and graduate students working in abstract algebra and its many applications

Topics in Varieties of Group Representations Samuil Mikhaïlovich Vovsi, 1992 This book is devoted to the theory of group representations and is intended for a broad audience of researchers and graduate students

Elementary Theory of Groups and Group Rings, and Related Topics Paul Baginski, Benjamin Fine, Anja Moldenhauer, Gerhard Rosenberger, Vladimir Shpilrain, 2020-02-10 This proceedings volume documents the contributions presented at the conference held at Fairfield University and at the Graduate Center CUNY in 2018 celebrating the New York Group Theory Seminar in memoriam Gilbert Baumslag and to honor Benjamin Fine and Anthony Gaglione It includes several expert contributions by leading figures in the group theory community and provides a valuable source of information on recent research developments

Geometry and Cohomology in Group Theory Peter H. Kropholler, Graham A. Niblo, Ralph Stöhr, 1998-05-14 This volume reflects the fruitful connections between group theory and topology It contains articles on cohomology representation theory geometric and combinatorial group theory Some of the world's best known figures in this very active area of mathematics have made contributions including substantial articles from Ol'shanskii, Mikhailovskii, Carlson, Benson, Linnell, Wilson, and Grigorchuk which will be valuable reference works for some years to come Pure mathematicians working in the fields of algebra topology and their interactions will find this book of great interest

Topics in Infinite Group Theory Benjamin Fine, Anja Moldenhauer, Gerhard Rosenberger, Annika Schürenberg, Leonard Wienke, 2024-11-18 This book gives an advanced overview of several topics in infinite group theory It can also be considered as a rigorous introduction to combinatorial and geometric group theory The philosophy of the book is to describe the interaction between these two important parts of infinite group theory In this line of thought several theorems are proved multiple times with different methods either purely combinatorial or purely geometric while others are shown by a combination of arguments from both perspectives The first part of the book deals with Nielsen methods and introduces the reader to results and examples that are helpful to understand the following parts The second part focuses on covering spaces and fundamental groups including covering space proofs of group theoretic results The third part deals with the theory of hyperbolic groups The subjects are illustrated and described by prominent examples and an outlook on solved and unsolved problems New edition now includes the topics on universal free groups quasiconvex subgroups and hyperbolic groups and also Stallings foldings and subgroups of free groups New results on groups of F types are added

Azumaya Algebras, Actions, and Modules Darrell Haile, 1992 This volume contains the proceedings of a conference in honor of Goro Azumaya's

seventieth birthday held at Indiana University of Bloomington in May 1990 Professor Azumaya who has been on the faculty of Indiana University since 1968 has made many important contributions to modern abstract algebra His introduction and investigation of what have come to be known as Azumaya algebras subsequently stimulated much research on such rings and algebras as well as applications to geometry and number theory In addition to honoring Professor Azumaya's contributions the conference was intended to stimulate interaction among three areas of his research interests Azumaya algebras group and Hopf algebra actions and module theory Aimed at researchers in algebra this volume contains contributions by some of the leaders in these areas

Geometric Group Theory: Volume 1 Graham A. Niblo, Martin A. Roller, 1993-07-30 For anyone whose interest lies in the interplay between groups and geometry these books will be an essential addition to their library

Two-Dimensional Homotopy and Combinatorial Group Theory Cynthia Hog-Angeloni, Wolfgang Metzler, Allan J. Sieradski, 1993-12-09 Basic work on two dimensional homotopy theory dates back to K Reidemeister and J H C Whitehead Much work in this area has been done since then and this book considers the current state of knowledge in all the aspects of the subject The editors start with introductory chapters on low dimensional topology covering both the geometric and algebraic sides of the subject the latter including crossed modules Reidemeister Peiffer identities and a concrete and modern discussion of Whitehead's algebraic classification of 2 dimensional homotopy types Further chapters have been skilfully selected and woven together to form a coherent picture The latest algebraic results and their applications to 3 and 4 dimensional manifolds are dealt with The geometric nature of the subject is illustrated to the full by over 100 diagrams Final chapters summarize and contribute to the present status of the conjectures of Zeeman Whitehead and Andrews Curtis No other book covers all these topics Some of the material here has been used in courses making this book valuable for anyone with an interest in two dimensional homotopy theory from graduate students to research workers

Tits Buildings and the Model Theory of Groups Katrin Tent, 2002-01-03 Introduction to buildings and their geometries with emphasis on model theoretic constructions covering recent developments

Combinatorial and Geometric Group Theory, Edinburgh 1993 Andrew J. Duncan, N. D. Gilbert, James Howie, 1995 The ICMS Workshop on Geometric and Combinatorial Methods in Group Theory held at Heriot Watt University in 1993 brought together some of the leading research workers in the subject Some of the survey articles and contributed papers presented at the meeting are collected in this volume The former cover a number of areas of current interest and include papers by S M Gersten R I Grigorchuk P H Kropholler A Lubotzky A A Razborov and E Zelmanov The contributed articles all refereed range over a wide number of topics in combinatorial and geometric group theory and related topics The volume represents a summary of the state of knowledge of the field and as such will be indispensable to all research workers in the area

The Descriptive Set Theory of Polish Group Actions Howard Becker, A. S. Kechris, 1996-12-05 In this book the authors present their research into the foundations of the theory of Polish groups and the associated orbit equivalence relations The particular case of

locally compact groups has long been studied in many areas of mathematics. Non locally compact Polish groups occur naturally as groups of symmetries in such areas as logic especially model theory ergodic theory group representations and operator algebras. Some of the topics covered here are topological realizations of Borel measurable actions universal actions applications to invariant measures actions of the infinite symmetric group in connection with model theory logic actions dichotomies for orbit spaces including Silver Glimm Effros type dichotomies and the topological Vaught conjecture

Scholl, Richard Lawrence Taylor, 1998-11-26 Conference proceedings based on the 1996 LMS Durham Symposium Galois representations in arithmetic algebraic geometry **Introduction to Operator**

Space Theory Gilles Pisier, 2003-08-25 The theory of operator spaces is very recent and can be described as a non commutative Banach space theory. An operator space is simply a Banach space with an embedding into the space $B(H)$ of all bounded operators on a Hilbert space H . The first part of this book is an introduction with emphasis on examples that illustrate various aspects of the theory. The second part is devoted to applications to C^* algebras with a systematic exposition of tensor products of C^* algebras. The third and shorter part of the book describes applications to non self adjoint operator algebras and similarity problems. In particular the author's counterexample to the Halmos problem is presented as well as work on the new concept of length of an operator algebra. Graduate students and professional mathematicians interested in functional analysis operator algebras and theoretical physics will find that this book has much to offer **Geometric Group**

Theory: Volume 2 Graham A. Niblo, Martin A. Roller, 1993-08-12 The articles in these two volumes arose from papers given at the 1991 International Symposium on Geometric Group Theory and they represent some of the latest thinking in this area. Many of the world's leading figures in this field attended the conference and their contributions cover a wide diversity of topics. This second volume contains solely a ground breaking paper by Gromov which provides a fascinating look at finitely generated groups. For anyone whose interest lies in the interplay between groups and geometry these books will be an essential addition to their library Summer School in Group Theory in Banff, 1996 Olga Kharlampovich, 1999 The third annual CRM Summer School took place in Banff Alberta Canada and was aimed toward advanced students and recent PhDs. This volume presents surveys from the group theory part of the theme year and examines different approaches to the topic: a geometric approach an approach using methods from logic and an approach with roots in the Bass Serre theory of groups acting on trees. The work offers a concise introduction to current directions of research in combinatorial group theory. Surveys in the text are by leading researchers in the field who are experienced expositors. The text is suitable for use in a graduate course in geometric and combinatorial group theory **Quantum Groups and Lie Theory** Andrew

Pressley, 2002-01-17 Since its genesis in the early 1980s the subject of quantum groups has grown rapidly. By the late 1990s most of the foundational issues had been resolved and many of the outstanding problems clearly formulated. To take stock

and to discuss the most fruitful directions for future research many of the world's leading figures in this area met at the Durham Symposium on Quantum Groups in the summer of 1999 and this volume provides an excellent overview of the material presented there It includes important surveys of both cyclotomic Hecke algebras and the dynamical Yang Baxter equation Plus contributions which treat the construction and classification of quantum groups or the associated solutions of the quantum Yang Baxter equation The representation theory of quantum groups is discussed as is the function algebra approach to quantum groups and there is a new look at the origins of quantum groups in the theory of integrable systems

Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces M. Bachir Bekka, Matthias Mayer, 2000-05-11 This book first published in 2000 focuses on developments in the study of geodesic flows on homogeneous spaces

Gromow Witten invariants Hodge theory Calabi Yau 3 folds mirror symmetry and classification of varieties *Models and Computability* S. Barry Cooper, John K. Truss, Association for Symbolic Logic, 1999-06-17 Second of two volumes providing a comprehensive guide to the current state of mathematical logic
