The Neuropsychology of Vision Manfred Fahle, Mark Greenlee, 2003 The Neuropsychology of Vision describes a range of exciting new approaches to neuropsychological investigation and provides a broad overview of visual neuropsychology The book starts by examining the neural basis of perception presenting important new research using single unit recordings Recent work using these methods has shown how the visual system relies strongly on feedback from higher to lower levels of information processing and that neural plasticity exists in the primary sensory cortices of adults areas previously thought to be hard wired The book also considers disturbances of visual perception such as agnosia neglect blindsight and achromatopsia describing what we now know about recovery and rehabilitation from cerebral visual disorders Throughout the book refers to new and adapted techniques for measuring brain activity including multi unit sum potential recording fMRI and transcranial magnetic stimulation With contributions from leading scientists in the vision sciences this book provides a state of the art review of the topic Book jacket

Visual Agnosia, second edition Martha J. Farah,2004-04-09 The cognitive neuroscience of human vision draws on two kinds of evidence functional imaging of normal subjects and the study of neurological patients with visual disorders Martha Farah s landmark 1990 book Visual Agnosia presented the first comprehensive analysis of disorders of visual recognition within the framework of cognitive neuroscience and remains the authoritative work on the subject This long awaited second edition provides a reorganized and updated review of the visual agnosias incorporating the latest research on patients with insights from the functional neuroimaging literature Visual agnosia refers to a multitude of different disorders and syndromes fascinating in their own right and valuable for what they can tell us about normal human vision Some patients cannot recognize faces but can still recognize other objects while others retain only face recognition Some see only one object at a time others can see multiple objects but recognize only one at a time Some do not consciously perceive the orientation of an

object but nevertheless reach for it with perfected oriented grasp others do not consciously recognize a face as familiar but nevertheless respond to it autonomically Each disorder is illustrated with a clinical vignette followed by a thorough review of the case report literature and a discussion of the theoretical implications of the disorder for cognitive neuroscience The second edition extends the range of disorders covered to include disorders of topographic recognition and both general and selective disorders of semantic memory as well as expanded coverage of face recognition impairments Also included are a discussion of the complementary roles of imaging and patient based research in cognitive neuroscience and a final integrative chapter presenting the big picture of object recognition as illuminated by agnosia research

Case Studies in the Neuropsychology of Vision Glyn W. Humphreys, 2013-04-15 One important means to understanding normal cognitive functions is the study of the breakdown of these functions following brain damage This book provides reviews of major case studies dealing with the breakdown of visual perception and recognition including the disorders of motion vision colour vision perceptual integration perceptual classification recognition of particular categories of object semantic access from vision in optic aphasia and recognition impairments with relative sparing of imagery The cases are discussed in the light of studies that have followed since and the chapters provide a context in which the contributions of the case studies can be evaluated

The Neurology of Vision Jonathan D. Trobe, 2001-03-29 The Neurology of Vision sets out the principles and information needed to understand and manage disorders of the visual pathways in the brain The author divides vision into three components The optical component addresses the eye's ability to properly focus light on the retina The retinocortical component converts light into neural signals in the retina transmitting them to the primary visual cortex Finally the integrative component converts this simple visual information into more complicated forms The symptoms and signs testing methods and diseases of each part of the visual system are presented using this unique structural component approach A final chapter discusses the visual manifestations of psychiatric disturbances The book is heavily illustrated with over 150 beautifully rendered line illustrations 50 radiographic brain images and 60 retinal photographs Case studies with teaching questions are also included to further the reader's knowledge and test understanding

Disorders of Brain, Behavior, and Cognition: The Neurocomputational Perspective J.A. Reggia, E. Ruppert, D.L. Glanzman, 1999-09-16 This book contains selected contributions of papers many presented at the Second International Workshop on Neural Modeling of Brain Disorders as well as a few additional papers on related topics including a wide range of presentations describing computational models of neurological neuropsychological and psychiatric disorders It is a unique comprehensive review of the state of the art of modeling cognitive and brain disorders appealing to a multidisciplinary audience of clinicians psychologists neuroscientists cognitive scientists computer scientists and other neural network researchers The rest of the book is organized along four main themes involving memory neuropsychological neurological and psychiatric disorders In general the cognitive disorders and these psychiatric diseases traditionally regarded as functional were modeled along

functional lines while those disorders traditionally viewed as organic neurological diseases generally drew more from knowledge of the underlying neurobiology and pathophysiology *Advances in Neural Information Processing Systems 10*
