Innovative approaches to agricultural water use for improving food security in Sub- Saharan Africa A. Inocencio, H. Sally, D. J. Merrey, 2003 This paper provides an overview of innovative options for developing and using water for food production in sub Saharan Africa SSA in light of the growing scarcity and competition for water resources These options include rainwater harvesting selective development of wetlands for agriculture exploitation of shallow groundwater and recycling urban waste The options are largely based on low cost individualized technologies which lend themselves to private sector promotion Water demand management approaches are also discussed

Water Harvesting for Plant Production Chris Reij, 1988 This report examines specific water harvesting systems in sub Saharan Africa Case studies of thirteen systems from six different countries are presented and conclusions are drawn under the headings of techniques and engineering production socio economic and project management aspects A number of projects throughout the region set up in the 1980 s have included water harvesting components However there is a wide range of techniques approaches and costs and the impact of these projects varies considerably The majority of systems introduced are for crop production but there are examples of water harvesting to establish trees in dry areas and for rehabilitation of grazing land also The need for voluntary participation in all stages of project development is highlighted It is evident that without this participation there is little or no chance of widespread adoption The importance of indigenous systems of water harvesting and their potential role as a base for planning is stressed in the conclusions
