Topics in Nonlinear Functional Analysis Djairo Guedes de Figueiredo (Mathematiker, Brasilien), 1967 *Linear and Nonlinear Functional Analysis with Applications* Philippe G. Ciarlet, 2013-10-10 This single volume textbook covers the fundamentals of linear and nonlinear functional analysis illustrating most of the basic theorems with numerous applications to linear and nonlinear partial differential equations and to selected topics from numerical analysis and optimization theory This book has pedagogical appeal because it features self contained and complete proofs of most of the theorems some of which are not always easy to locate in the literature or are difficult to reconstitute It also offers 401 problems and 52 figures plus historical notes and many original references that provide an idea of the genesis of the important results and it covers most of the core topics from functional analysis *Nonlinear Functional Analysis* Klaus Deimling, 2013-10-09 This text offers a survey of the main ideas concepts and methods that constitute nonlinear functional analysis It features extensive commentary many examples and interesting challenging exercises 1985 edition *Topics in Nonlinear Functional Analysis, 1973-1974* [By] L. Geometric Properties of Banach Spaces and Nonlinear Iterations Charles Chidume, 2008-12-21 The contents of this monograph fall within the general area of nonlinear functional analysis and applications We focus on an important topic within this area geometric properties of Banach spaces and nonlinear iterations a topic of intensive research efforts especially within the past 30 years or so In this theory some geometric properties of Banach spaces play a crucial role In the first part of the monograph we expose these geometric properties most of which are well known As is well known among all infinite dimensional Banach spaces Hilbert spaces have the nicest geometric properties The availability of the inner product the fact that the proximity map or nearest point map of a real Hilbert space H onto a closed convex subset K of H is Lipschitzian with constant 1 and the following two identities $\|x - y\|^2 = \|x\|^2 - 2\langle x, y \rangle + \|y\|^2$ and $\|x - y\|^2 = \|x\|^2 - 2\langle x, y \rangle + \|y\|^2$ which hold for all $x, y \in H$ are some of the geometric properties that characterize inner product spaces and also make certain problems posed in Hilbert spaces more manageable than those in general Banach spaces However as has been rightly observed by M. Hatzewinkel many and probably most mathematical objects and models do not naturally live in Hilbert spaces Consequently to extend some of the Hilbert space techniques to more general Banach spaces analogues of the identities and have to be developed

Nonlinear Functional Analysis Jacob T. Schwartz, 1969 **Contributions to Nonlinear Functional Analysis** Eduardo H. Zarantonello, 2014-05-10 Contributions to Nonlinear Functional Analysis contains the proceedings of a Symposium on Nonlinear Functional Analysis held in Madison Wisconsin on April 12-14 1971 under the sponsorship of the University of Wisconsin's Mathematics Research Center The symposium provided a forum for discussing various topics related to nonlinear functional analysis from transversality in nonlinear eigenvalue problems to monotonicity methods in Hilbert spaces and some applications to nonlinear partial differential equations Comprised of 15 chapters this book begins by presenting an

extension of Leray Schauder degree and an application to a nonlinear elliptic boundary value problem The discussion then turns to the use of degree theory to prove the existence of global continua of solutions of nonlinear eigenvalue problems transversality in nonlinear eigenvalue problems and how variational structure can be used to study some local questions in bifurcation theory Subsequent chapters deal with the notion of monotone operators and monotonicity theory a nonlinear version of the Hille Yosida theorem a version of the penalty method for the Navier Stokes equations and various types of weak solutions for minimizing problems in the spirit of duality theory for convex functionals This monograph will be of interest to students and practitioners in the field of mathematics who want to learn more about nonlinear functional analysis
