Matsushima, 1992 In the past thirty years differential geometry has undergone an enormous change with infusion of topology Lie theory complex analysis algebraic geometry and partial differential equations Professor Matsushima played a leading role in this transformation by bringing new techniques of Lie groups and Lie algebras into the study of real and complex manifolds This volume is a collection of all the 46 papers written by him **Lectures on Algebraic Cycles** Spencer Bloch, 2010-07-22 Spencer Bloch's 1979 Duke lectures a milestone in modern mathematics have been out of print almost since their first publication in 1980 yet they have remained influential and are still the best place to learn the guiding philosophy of algebraic cycles and motives This edition now professionally typeset has a new preface by the author giving his perspective on developments in the field over the past 30 years The theory of algebraic cycles encompasses such central problems in mathematics as the Hodge conjecture and the Bloch Kato conjecture on special values of zeta functions The book begins with Mumford's example showing that the Chow group of zero cycles on an algebraic variety can be infinite dimensional and explains how Hodge theory and algebraic K theory give new insights into this and other phenomena **Topological Algebra** Irving Kaplansky, 1959 **The Geometry of some special Arithmetic Quotients** Bruce Hunt, 2006-11-14 The book discusses a series of higher dimensional moduli spaces of abelian varieties cubic and K3 surfaces which have embeddings in projective spaces as very special algebraic varieties Many of these were known classically but in the last chapter a new such variety a quintic fourfold is introduced and studied The text will be of interest to all involved in the study of moduli spaces with symmetries and contains in addition a wealth of material which has been only accessible in very old sources including a detailed presentation of the solution of the equation of 27th degree for the lines on a cubic surface Geometric Control and Non-holonomic Mechanics Velimir Jurdjevic, Richard W. Sharpe, 1998 Nine papers from the June 1996 conference focus on research directions having origins in mechanics and differential geometry but driven by modern control theory Among the topics lie determined systems and optimal problems with symmetries Dubins problem in the hyperbolic plane using the open disc model and geometry and structure in the control of linear time invariant systems Annotation copyrighted by Book News Inc Portland OR **Fredholm Theory in Banach Spaces** Anthony Francis Ruston, 2004-06-03 Presents analogues for operators on Banach spaces of Fredholm's solution of integral equations of the second kind **Introduction to Global Analysis** Donald W.
