Redirecting Alzheimer Strategy Denis Larrivee, 2019-09-25 It is fair to say that no brain disease occupies more research study today than Alzheimer's disease AD Among the many excellent reasons for this circumstance are the bleak prognosis and relentless progression large cohorts of baby boomers entering an age of greatly increased cognitive risk and spectacular advances in medical care that have prolonged lifespan Often unattributed is the success of the research enterprise that has instilled confidence in AD's ultimate defeat Yet despite decades of intense research AD remains poorly understood an enigma amid a tide of neuroscientific advance What these inconclusive results apparently call into question is an understanding of cognition that views it from the bottom up the study of which is eminently suited by the scientific method and that dispenses with a philosophy of biology concerned with how organismal properties operate for which cognition is the medium Culled from AD's new and old research archives the chapters in this text accordingly lay out an argument for strategically new pathways that wander through cognition's global terrain and that may ultimately offer surer ground for AD treatment

Covid-19 changed the lives of millions of people around the world. The effects of the global pandemic on the physical and psychological health of individuals, as well as on their behavioral habits, relationships, and the way they communicate, do not seem to be only short or medium term, but on the contrary, appear to be long-lasting. In the same way that it is possible to use the term long covid to refer to the long-term effects on the physical health of individuals who have contracted the virus, so we think it is possible to use the expression psychological long covid to indicate the long-term effects on the psychological health of individuals, not only of those who have been infected but more generally of all those who have had to cope with social restrictions, lockdowns, distancing, remote work, and learning, etc., imposed by the pandemic. At the same time, many people demonstrated resilience as the capacity to cope with adverse events through positive adaptation. Popular Photography, 1991-01.
