War And The Health Of Nations:

War and the Health of Nations Zaryab Iqbal, 2010-02-10 Assessments of the costs of war generally focus on the financial political military and territorial risks associated with involvement in violent conflict Often overlooked are the human costs of war particularly their effects on population well being In *War and the Health of Nations* Zaryab Iqbal explores these human costs by offering the first large scale empirical study of the relationship between armed conflict and population health Working within the influential human security paradigm which emphasizes the security of populations rather than states as the central object of global security Iqbal analyzes the direct and indirect mechanisms through which violent conflict degrades population health In addition to battlefield casualties these include war's detrimental economic effects its role in the creation of refugees and forced migration and the destruction of societies infrastructure In doing so she provides a comprehensive picture of the processes through which war and violent conflict affect public health and the well being of societies in a cross national context *War and the Health of Nations* provides a conceptual and theoretical framework for understanding the influence of violent interstate and intrastate conflict on the quality of life of populations and empirically analyzes the war and health relationship through statistical models using a universal sample of states The analyses provide strong evidence for the direct as well as the indirect effects of war on public health and offer important insights into key socio economic determinants of health achievement The book thus demonstrates the significance of population health as an important consequence of armed conflict and highlights the role of societal vulnerabilities in studies of global security

Competitiveness Of Nations 1, The: Navigating The Us-china Trade War And The Covid-19 Global Pandemic Dong-sung Cho, Hwiy-chang Moon, 2022-05-25 In the existing reports on national competitiveness and rankings such as IMD World Competitiveness Yearbook and WEF Global Competitiveness Report there are sizable discrepancies in the ranking order for the same countries As a result the reader is often confused because such an outcome creates difficulties for government officials when translating these findings into real world policies These discrepancies are actually due to the differences in logic and analytical models used by IMD and WEF Therefore in recognizing the problems and limitations of these models this book presents the IPS model as a new approach As an extension of Michael Porter's diamond model it demonstrates a robust set of methodologies as well as offers a number of key policy implications for countries around the world that wish to enhance their national competitiveness The analytical tools used in this book can be further utilized for other units of analysis such as industries and firms As this book provides a series of sophisticated methodologies and specific

guidelines for enhancing national competitiveness both academics and practitioners can derive useful implications from this research. Alongside the theoretical frameworks and methodologies for national competitiveness presented in this book, timely topics are included such as the COVID 19 global pandemic and the US China trade war. This book also includes various country specific real world cases that are assessed from the perspective of both developed and developing countries.

Physicians at War Fritz Allhoff, 2008-03-22 This paper offers a brief examination of ethical health issues arising from military operations and outlines which if any of these ethical health issues apply to current Australian Defence Force ADF military operations. The transparency of military operations provided through real time global media reporting and the Internet has raised public awareness of incidents that can be viewed broadly as ethical issues or dilemmas. While many of these issues are not new, it is the changing context of post cold war military operations and scale and demand of humanitarian operations that places new requirements on how the ADF best addresses these potential issues before they become critical incidents. In identifying potential ethical issues arising from military health operations, it is recognized that military health personnel operate within a command and control organizational structure and associated culture. It is also recognized that the complexity of the issues and the environment within which military health personnel are expected to operate will raise ethical health issues not likely to be encountered to the same degree by those health practitioners operating in the average suburban practice or hospital except when health personnel are confronted with large scale emergencies such as those encountered with recent terrorist attacks and massacres.

War Epidemics Matthew Smallman-Raynor, Andrew Cliff, 2004-06-17 Down the ages war epidemics have decimated the fighting strength of armies, caused the suspension and cancellation of military operations and have brought havoc to the civil populations of belligerent and non belligerent states alike. This book examines the historical occurrence and geographical spread of infectious diseases in association with past wars. It addresses an intrinsically geographical question: how are the spatial dynamics of epidemics influenced by military operations and the directives of war? The term historical geography in the title indicates the authors' primary concern with qualitative analyses of archival source materials over a 150 year time period from 1850 and this is combined with quantitative analyses less frequently associated with historical studies. Written from the viewpoints of historical geography, epidemiology and spatial analysis, this book examines in four parts the historical occurrence and geographical spread of infectious diseases in association with wars. Part I War and Disease surveys war disease associations from early times to 1850. Part II Temporal Trends studies time trends since 1850. Part III A Regional Pattern of War Epidemics examines grand themes in the war disease complex. Part IV Prospects considers a series of war related issues of epidemiological significance in the twenty first century.

War Trauma and its Aftermath Laurence Armand French,Lidija Nikolic-Novakovic,2011-12-16 War trauma has long been associated with post traumatic stress disorder PTSD a term coined in 1980 to explain the post war impact of Vietnam veterans The Gulf and Balkan wars added new dimensions to the traditional PTSD definition due largely to the changing dynamics of these wars With these wars came unprecedented use of reserve and National Guard personnel in U S forces along with the largest

contingent of female military personnel to date Rapid deployment sexual assaults and suicides surfaced as paramount untreated problems within coalition force Rapes torture suicides and a high prevalence of untreated civilian victims of the Balkan wars added to the new dimensions of the traumatic stress continuum Suicide bombers and roadside bombings added to the definition of combat stress as military personnel in Iraq and Afghanistan were forced to be constantly vigilant for these attacks regardless of whether they served in combat areas
