Landscape Resilience Catrin Schmidt, 2021-10-25 This book explains what makes landscapes resilient Why are some landscapes able to recover quickly from disruptive events or crises while others are completely thrown off balance for the foreseeable future The author sets out in search of the influencing factors and conditional structures of landscape resilience and not only evaluates the current state of the art but also explores landscapes around the globe that could not be more contrasting from arid agricultural landscapes to boreal forest landscapes from atolls to saline landscapes from terraced landscapes to cities Just as diverse as the landscape types are the factors considered that can put landscapes under stress However diverse the case studies are in detail their fascinating mosaic shows at the same time that there are overarching principles that can be used to increase the resilience of landscapes in a targeted way so that landscapes emerge from crises strengthened rather than weakened This book is a translation of the original German 1st edition *Landschaftliche Resilienz* by Catrin Schmidt published by Springer Verlag GmbH Germany part of Springer Nature in 2020 The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
