Wastewater Treatment By Immobilized Cells:

Wastewater Treatment by Immobilized Cells R. D. Tyagi, Kannan Vembu, 1990-05-23 The purpose of this state of the art publication is to provide up to date and pertinent scientific information concerning immobilized cell processes for treatment of wastewater It comprehensively reviews and examines essential data on the feasibility of various immobilization methods with special reference to wastewater treatment It also discusses methods of identification of structure and composition of microbial aggregates and analytical methods for the estimation of biomass in the presence of carriers This work reports the novel process of immobilized microalgae and cyanobacteria for wastewater treatment while highlighting their future prospects Additionally it critically reviews the various fixed film bioreactor configurations This book is a must for all engineers planners scientists students and sewage treatment plant operators Immobilized Cells: Basics and Applications

R.M. Buitelaar, C. Bucke, J. Tramper, R.H. Wijffels, 1996-03-21 This publication contains full papers of both oral and poster presentations of the symposium Immobilized Cells Basics and Applications that was held in Noordwijkerhout The Netherlands 26-29 November 1995 This volume covers recent developments in the field of immobilization e.g. new support materials characterization of support materials kinetic characterizations dynamic modelling bioreactor types scale up and applications are also given Applications in the field of medicine fermentation technology food technology and environmental technology are described Guidelines for research with immobilized cells Based on the scientific sessions a strategy of research and methods for characterization of immobilized cells especially in view of applications are given The goal was to relate basic research to applications and to extract guidelines for characterization of immobilized cells in view of process design and application from the contributions The manuscripts presented in these proceedings give an extensive and recent overview of the research and applications of immobilized cell technology Immobilized Cells Rene H. Wijffels, 2012-12-06 used Generally in the development of a process research activity will start with the physiology of the immobilized cells and be concluded by scale up and application Guidelines for the different phases in research are given below Springer Lab Manual about immobilized cells The Springer Lab Manual about immobilized cells is structured in such a way that guidelines that resulted from the conference Immobilized Cells Basics and Applications were followed and translated into some practical methods As for the guidelines for immobilized cells a structure was chosen in which general aspects of immobilization were covered the kinetics were described and engineering aspects were covered Besides laboratory methods some simple calculation procedures have been given in this lab manual The combination of the practical methods with the calculations provide a tool for carrying out research with immobilized cells The lab manual concludes with some recent promising and practical cases of immobilized cells as examples of applications with potential Immobilized Cells J. Tampion, M. D. Tampion, 1987-12-10 This 1987 book gives a coherent overview of preparation and uses of immobilized enzymes

Wastewater Treatment with Algae Yuk Shan Kwong, Nora F.Y. Tam, 2013-03-09 This book brings together environmental

scientists and engineers to discuss the development of new approaches and methodologies which utilize microalgae for biological wastewater treatment. The researchers report their recent findings on microalgal removal of nutrients, heavy metals and other organic pollutants from sewage and industrial effluents. The technologies discussed here include biosorption and bioaccumulation of heavy metals, cell immobilization of algae and mathematical modelling of metal uptake by cells. This book is unique in that it takes a practical approach to the subject matter and is a useful reference both in and outside of the laboratory.

Emerging Environmental Technologies, Volume II Vishal Shah, 2009-12-02. Within the span of last couple of years, the increasing human interference with various natural ecosystems and higher discharge of pollutants has presented numerous challenges to the society related to preserving the nature for a better tomorrow. The challenges also mount pressure on the scientific community to invent technologies that would provide solutions to the problems that are man-made and also decrease the negative consequences that we are facing because of our own actions. This edited book attempts to present eight technological innovations that have shown potential to provide answers to a few challenges. Like the previous collection, the described innovations in the current volume also cover a range of areas including water and soil pollution, bio-sensors and energy. However, it is to be realized that no combination of technology can be enough to make a sizeable difference. As I said in my last collection, technological advances have to be integrated with a change in social behavior. The philosophy of sustainable development has to be the principle of future planning and growth. In this collection, I am pleased to include an article on noise pollution. Noise is a pollutant of our own behavior and can only be solved by a behavioral change. The change that is either voluntary or enforced by laws. As an environmental scientist, noise is not normally a pollutant that would come in mind as a leading pollutant.

Organic Waste Recycling: Technology, Management and Sustainability Chongrak Polprasert, Thammarat Koottatep, 2017-06-15. This fourth edition of Organic Waste Recycling is fully updated with new material to create a comprehensive and accessible textbook. New chapter on constructed wetlands for wastewater and faecal sludge stabilization. New sections on waste recycling vs climate change and water, faecal sludge and its characteristics, hydrothermal carbonization technology, up-to-date environmental criteria and legislation and environmental risk assessment. New case studies with emphasis on practices in both developed and developing countries have been included along with more exercises at the end of chapters to help the readers understand the technical principles and their application. Novel concepts and strategies of waste management are presented. Up-to-date research findings and innovative technologies of waste recycling program are provided. This textbook is intended for undergraduate and graduate students majoring in environmental sciences and engineering as well as researchers, professionals and policy makers who conduct research and practices in the related fields. It is essential reading for experts in environmental science and engineering and sustainable waste reuse and recycling in both developed and developing countries.
