Theoretical Aspects of Heterogeneous Catalysis John B. Moffat, 2013-03-09 Catalysis involves just about every field of scientific study This means that a multidisciplinary approach is needed in catalytic studies Catalysis involves breaking and forming new bonds and this requires an understanding of either adsorption by bonding to an extended structures or bonding in a coordination sphere Any understanding of catalytic action must necessarily involve an understanding of this bonding Even 200 years ago scientists were aware that a properly treated material such as charcoal could adsorb an enormous quantity of gas In 1812 de Sussure English translation *Annals of Philosophy* 6 241 1815 proposed that the ability of a material to increase the rate of chemical reaction was due to adsorption of the material in the fine structure of the solid so that the concentrations of the reactants were significantly increased and this increase in concentration led to an increase in reaction rate During the 1800s little advance was made in the understanding of adsorption
