What Is Mathematical Logic? J. N. Crossley, C.J. Ash, C.J. Brickhill, J.C. Stillwell, 2012-08-29 A serious introductory treatment geared toward non logicians this survey traces the development of mathematical logic from ancient to modern times and discusses the work of Planck Einstein Bohr Pauli Heisenberg Dirac and others 1972 edition **What Is Mathematical Logic?** Guillermo Badia, John N. Crossley, John C. Stillwell, Christopher J. Ash +, Christopher J. Brickhill +, Neil H. Williams, 2025-12-11 Mathematical logic has grown into an indispensable tool in computer science as well as other parts of mathematics This concise book presents the subject of mathematical logic in a lively and approachable fashion although logic can be a formidably abstruse topic even for mathematicians **What is Mathematical Logic?** John N. Proof, Computation and Agency Johan van Benthem, Amitabha Gupta, Rohit Parikh, 2011-04-02 Proof Computation and Agency Logic at the Crossroads provides an overview of modern logic and its relationship with other disciplines As a highlight several articles pursue an inspiring paradigm called social software which studies patterns of social interaction using techniques from logic and computer science The book also demonstrates how logic can join forces with game theory and social choice theory A second main line is the logic language cognition connection where the articles collected here bring several fresh perspectives Finally the book takes up Indian logic and its connections with epistemology and the philosophy of science showing how these topics run naturally into each other *Ω -Bibliography of Mathematical Logic* Heinz-Dieter Ebbinghaus, 2013-06-29 Gert H M ller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg 11 Non classical Logics W Rautenberg 111 Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI Proof Theory Constructive Mathematics J E Kister D van Dalen A S Troelstra *Perspectives on the History of Mathematical Logic* Thomas Drucker, 2009-05-21 This volume offers insights into the development of mathematical logic over the last century Arising from a special session of the history of logic at an American Mathematical Society meeting the chapters explore technical innovations the philosophical consequences of work during the period and the historical and social context in which the logicians worked The discussions herein will appeal to mathematical logicians and historians of mathematics as well as philosophers and historians of science this is an important book It exposes the richness of ideas and viewpoints the difficult and not always direct pathways taken in the development of mathematical logic in the last century and the various factors which did and continue to affect that development Modern Logic What is Mathematical Logic? , 1990 Truth, Meaning, Justification, and Reality Michael Frauchiger, 2017-11-20 This collection concentrates on vital themes from Michael Dummett one of the most influential and creative analytic philosophers of our time The contributors who include some of Dummett s distinguished former students critically reflect on various concerns of Dummett s ground breaking work in philosophy of language metaphysics and philosophy of mathematics and logic The essays direct towards aspects of Dummett s pioneering work in the history of

analytical philosophy particularly his interpretations of the works of Frege and of Wittgenstein which in conjunction with Dummett's own highly original ideas on truth and meaning have shaped decisive contemporary debates concerning notably the distinction between realism and anti-realism. Further the volume includes a cheerfully serious excursion into popular philosophy by Dummett himself and reveals less known facets of Dummett's many-sided work and activities such as his political philosophy of immigration and asylum and beyond that his untiring and warm-hearted campaign for racial justice and humanity. Contributors: Michael Dummett, Eva Picardi, Crispin Wright, Timothy Williamson, Ian Rumfitt, Daniel Isaacson, Dag Prawitz, Dale Jacquette, Alex Burri, Michael Frauchiger. *Mathematical Problems from Applied Logic I* Dov M.

Gabbay, Michael Zakharyashev, 2006-07-02 *Mathematical Problems from Applied Logic I* presents chapters from selected world-renowned logicians. Important topics of logic are discussed from the point of view of their further development in light of requirements arising from their successful application in areas such as Computer Science and AI language. An overview of the current state as well as open problems and perspectives are clarified in such fields as non-standard inferences in description logics, logic of provability, logical dynamics and computability theory. The book contains interesting contributions concerning the role of logic today including some unexpected aspects of contemporary logic and the application of logic.

Ω-Bibliography of Mathematical Logic Wolfgang Rautenberg, 1987-06-16 Gert H. Müller. The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect. In addition, given the rapidly growing sophistication, specialization and hence subdivision of logic, researchers, students and teachers may have a hard time getting an overview of the existing literature, particularly if they do not have an extensive library available in their neighbourhood. They simply do not even know what to ask for. More specifically, if someone vaguely knows that something vaguely connected with his interests exists somewhere in the literature, he may not be able to find it even by searching through the publications scattered in the review journals. Answering this challenge was and is the central motivation for compiling this Bibliography. The Bibliography comprises presently the following six volumes listed with the corresponding Editors: I Classical Logic W. Rautenberg; II Non-classical Logics W. Rautenberg; III Model Theory H. D. Ebbinghaus; IV Recursion Theory P. G. Hinman; V Set Theory A. R. Blass; VI Proof Theory Constructive Mathematics J. E. Kister, D. van Dalen, A. S. Troelstra. *Logic Colloquium 2000* René Cori, Alexander Razborov, Stevo Todorčević, Carol Wood, 2017-03-30. Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years but they are now in print once again. This volume, the nineteenth publication in the Lecture Notes in Logic series, collects the proceedings of the European Summer Meeting of the Association for Symbolic Logic held in Paris, France, in July 2000. This meeting marked the centennial anniversary of Hilbert's famous lecture and was held in the same hall at La Sorbonne where Hilbert presented his problems. Three long articles based on tutorials given at the meeting present

accessible expositions of developing research in model theory computability and set theory The eleven subsequent papers present work from the research frontier in all areas of mathematical logic Sets, Models and Recursion Theory.
