Well Completion Manual:

Sand Control in Well Construction and Operation Davorin Matanovic, Marin Cikes, Bojan Moslavac, 2012-02-22
Produced sand causes a lot of problems. From that reason, sand production must be monitored and kept within acceptable limits. Sand control problems in wells result from improper completion techniques or changes in reservoir properties. The idea is to provide support to the formation to prevent movement under stresses resulting from fluid flow from reservoir to well bore. That means that sand control often results with reduced well production. Control of sand production is achieved by reducing drag forces, the cheapest and most effective method, mechanical sand bridging, screens, gravel packs, and increasing of formation strength, chemical consolidation. For open hole completions or with uncemented slotted liners, screens, sand failure will occur and must be predicted. Main problem is plugging. To combat well failures due to plugging and sand breakthrough, Water Packing or Shunt Packing are used.

Well Control for Completions and Interventions explores the standards that ensure safe and efficient production, flow well integrity, and well control for oil rigs, focusing on the post-Macondo environment where tighter regulations and new standards are in place worldwide. This long awaited manual for engineers and managers involved in the well completion and intervention side of a well's life covers the fundamentals of design equipment and completion fluids. In addition the book covers more important and distinguishing components such as well barriers and integrity envelopes, well kill methods specific to well completion and other forms of operations that involve completion like pumping and stimulation including hydraulic fracturing and shale coiled tubing wireline and subsea intervention. Provides a training guide focused on well completion and intervention. Includes coverage of subsea and fracturing operations. Presents proper well kill procedures. Allows readers to quickly get up to speed on today's regulations post Macondo for well integrity barrier management and other critical operation components.
