

THE AIR WHICH PRESSURE IN THE TUBE IS EXERCISED ON

Objectives

The atmosphere has weight as well as horizontal dimensions. For a more complete understanding of various atmospheric self-regulating conditions, it is necessary, e.g., to explain atmospheric fluid body motion caused by pressure and temperature under the same weight (homogeneity in the horizontal) direction. The atmosphere is subject primarily to variations in vertical airways dimensions and temperature variations during the continuous cycle through its whole atmospheric structure phase.

After comparing the atmospheric conditions, we should be able to:

1. Describe the vertical atmospheric structure of the atmosphere in the atmosphere the "vertical" layer and its basic structure.
2. Compare the temperature profile specified by the U.S. Standard atmosphere with actual conditions of the lower atmosphere.

Background

Figure 1 shows the average vertical temperature profile of the earth's atmosphere as a function of altitude above Earth's surface.
