Hot Cracking Phenomena in Welds II Thomas Böllinghaus, Horst Herold, Carl E. Cross, J C Lippold, 2008-08-07 Failure of welded components can occur during service as well as during fabrication Most common analyses of the resistance of welded components against failure are targeted at crack avoidance Such evaluations are increasingly carried out by modern weldability studies i e considering interactions between the selected base and filler materials structural design and welding process Such weldability investigations are particularly targeted to prevent hot cracking as one of the most common cracking phenomena occurring during weld fabrication To provide an international information and discussion platform to combat hot cracking an international workshop on Hot Cracking Phenomena in Welds has been created based on an initiative of the Institute for Materials and Joining Technology at the Otto von Guericke University in Magdeburg and the Division V 5 Safety of Joined Components at the Federal Institute for Materials Research and Testing BAM in Berlin Germany The first workshop was organized in Berlin under the topics mechanisms and phenomena metallurgy and materials modelling and simulations as well as testing and standardization It consisted of 20 individual contributions from eight countries which were compiled in a book that found a very ready market not only in the welding community As a consequence of increasing interest it has been decided to establish the Workshop on Hot Cracking Phenomena in Welds as a regular event every three years embedded in the International Institute of Welding IIW Attached to the IIW Commission IX and II Spring intermediate meetings the second workshop was organized in March 2007 *Cracking in High-strength Steel Weldments* P. A. Kammer, K. Masubuchi, R. E. Monroe, 1964 Weldment cracking is a broad complex field Even if one considers only cracking of steel weldments the

problems range from cracking at temperatures near the solidus during welding to cracking at room temperature days weeks or months after welding is completed Numerous reports of investigations in this field are contained in the published and unpublished literature However most of these reports cover only a particular problem in a specific area of the broad field of weldment cracking This review attempts to cover the major aspects of the entire field of weldment cracking Necessarily the review is for the most part general only being specific in a few instances to illustrate a point Author **Failure**
