Hart, 2017-09-17 Excerpt from *Welding Theory Practice Apparatus and Tests Electric Thermit and Hot Flame Processes* Test and cost data must be taken with a grain of salt The test data have been compiled from various sources Those tests given for iron are standard and cannot be questioned Those tests given for the special processes are more recent and in most cases have been made by interested parties They are no doubt accurate but at present the special processes cannot be so well represented by test data as by the actual work they turn out The same may be said Of cost data The prospective purchaser Of welding machinery must figure the cost of his apparatus plus the cost of labor and the depreciation But above all he must satisfy himself that the apparatus he chooses is the best for his kind of welding About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Welding**
