Piping and Equipment Design William M. (Bill) Huitt, 2016-10-24 The only comprehensive and authoritative reference guide to the ASME Bioprocessing Piping and Equipment BPE standard This is a companion guide to the ASME Bioprocessing Piping and Equipment BPE Standard and explains what lies behind many of the requirements and recommendations within that industry standard Following an introductory narrative to the Standard s early history industry related codes and standards are explained the design and engineering aspects cover construction materials both metallic and nonmetallic then components fabrication assembly and installation of piping systems are explored Examination Inspection and Testing then precede the ASME BPE certification process concluding with a discussion on system design The author draws on many years experience and insights from first hand involvement in the field of industrial piping design engineering construction and management which includes the bioprocessing industry The reader will learn why dimensions and tolerances process instrumentation and material selection play such an integral part in the manufacture of components and instrumentation This

easy to understand and navigate guide will assist engineers design piping chemical etc who need to understand the basis for much of the Standard's content as do the contractors and inspectors who have to meet and validate compliance with the BPE Standard *Metallurgy and Design of Alloys with Hierarchical Microstructures* Krishnan K. Sankaran, Rajiv S.

Mishra, 2017-06-14 *Metallurgy and Design of Alloys with Hierarchical Microstructures* covers the fundamentals of processing microstructure property relationships and how multiple properties are balanced and optimized in materials with hierarchical microstructures widely used in critical applications. The discussion is based principally on metallic materials used in aircraft structures however because they have sufficiently diverse microstructures the underlying principles can easily be extended to other materials systems. With the increasing microstructural complexity of structural materials it is important for students, academic researchers and practicing engineers to possess the knowledge of how materials are optimized and how they will behave in service. The book integrates aspects of computational materials science, physical metallurgy, alloy design, process design and structure properties relationships in a manner not done before. It fills a knowledge gap in the interrelationships of multiple microstructural and deformation mechanisms by applying the concepts and tools of designing microstructures for achieving combinations of engineering properties such as strength, corrosion resistance, durability and damage tolerance in multi-component materials used for critical structural applications. Discusses the science behind the properties and performance of advanced metallic materials. Provides for the efficient design of materials and processes to satisfy targeted performance in materials and structures. Enables the selection and development of new alloys for specific applications based upon evaluation of their microstructure as illustrated in this work. **Modern Graphics Communication** Shawna
