XML as a Data Exchange Medium for DoD Legacy Databases Kris Pradeep,2002-06-01 This thesis addresses the issue of interoperability in DoD legacy system databases and evaluates XML as a tool for transferring message data between varied systems With the demands for increased communication the dire requirement for a common mode of information transfer is greatly realized Many legacy systems have developed their own unique interfaces XML is one solution which can help ease the transition to a common interface This thesis is a part of a larger team effort In contributing to this larger effort a software program was developed to generate select messages in their native and XML formats **Smart Engineering System Design** Cihan H. Dagli,2005 The newest volume in this series presents refereed papers in the following categories and their applications in the engineering domain Neural Networks Complex Networks Evolutionary Programming Data Mining Fuzzy Logic Adaptive Control Pattern Recognition Smart Engineering System Design These papers are intended to provide a forum for researchers in the field to exchange ideas on smart engineering system design *Commerce Business Daily* ,2000-03 XML in a Nutshell Elliotte Rusty Harold,W. Scott Means,2002 XML in a Nutshell thoroughly explains the basic rules that all XML documents and all XML document creators must adhere to Quick reference chapters also detail syntax rules and usage examples for the core XML technologies including XML DTDs SPath XSLT SAX and DOM

Succeeding with Object Databases Akmal B. Chaudhri,Roberto Zicari,2001 Take a tour with leading researchers and developers for a practical look at object databases Whether you currently work with or are thinking of moving to object databases Chaudhri and Zicari provide a collection of real world case studies and examples that demonstrate how some of the world's leading companies and research institutions are leveraging Java XML and Object Relational Systems to build robust databases Starting with a comprehensive introduction to object and object relational databases the book then offers detailed discussions on some of the latest topics in the field such as JDBC and SQLJ support in relational databases and database modeling using UML You'll also learn about object to relational mapping tools architectural issues that influence performance and the issues of complexity and scale How popular tools from Computer Associates eXcelon GemStone Objectivity Oracle Versant and Poet were used in the case studies is also discussed The companion Web site at www.wiley.com/compbooks/chaudhri includes links to object oriented database software applications and additional resources Visit our Web site at www.wiley.com/compbooks/chaudhri

Evaluation of the Extensible Markup Language (XML) as a Means for Establishing Interoperability Between Heterogeneous Department of Defense (DoD) Databases David Rex Hina,2000-09-01 This thesis evaluates the application of

current Extensible Markup Language XML tools and technologies toward solving data interoperability issues between legacy data repositories Past efforts to address these issues have largely failed XML has the capability to address many of the past problems but this can only be accomplished when the supporting COTS tools and technologies are available The thesis first establishes the underlying issues that need to be addressed It then evaluates the current state of technologies and COTS products and describes the advantages and disadvantages of each Finally it focuses in on the schema for a specific relational database demonstrates a process by which data exchange can be implemented and outlines the issues remaining to be solved

Evaluation of the Extensible Markup Language (XML) as a Means of Establishing Interoperability Between Multiple Department of Defense (DoD) Databases Eddie L. Davis,2001-06-01 This thesis evaluates the ability of the Extensible Markup Language XML to address the interoperability problem that exists between Department Of Defense DOD legacy systems Due to the different Database Management Systems DBMS used within DOD interoperability is a major flaw The need for communication between the DBMS within DOD is necessary and this thesis will focus on this problem This thesis focuses in on the problems that exist and assesses XML as a means of correcting these problems This thesis uses the Joint Common Database JCDB as a means of showing XML to be a viable solution

Relational and XML Data Exchange Marcelo Arenas,2010 Data exchange is the problem of finding an instance of a target schema given an instance of a source schema and a specification of the relationship between the source and the target Such a target instance should correctly represent information from the source instance under the constraints imposed by the target schema and it should allow one to evaluate queries on the target instance in a way that is semantically consistent with the source data Data exchange is an old problem that re emerged as an active research topic recently due to the increased need for exchange of data in various formats often in e business applications In this lecture we give an overview of the basic concepts of data exchange in both relational and XML contexts We give examples of data exchange problems and we introduce the main tasks that need to be addressed We then discuss relational data exchange concentrating on issues such as relational schema mappings materializing target instances including canonical solutions and cores query answering and query rewriting After that we discuss metadata management i e handling schema mappings themselves We pay particular attention to operations on schema mappings such as composition and inverse Finally we describe both data exchange and metadata management in the context of XML We use mappings based on transforming tree patterns and we show that they lead to a host of new problems that did not arise in the relational case but they need to be addressed for XML These include consistency issues for mappings and schemas as well as imposing tighter restrictions on mappings and queries to achieve tractable query answering in data exchange

XML Databases and the Semantic Web Bhavani Thuraisingham,2002-03-27 Efficient access to data sharing data extracting information from data and making use of the information have become urgent needs for today s corporations With so much data on the Web managing it with conventional tools is becoming almost impossible New tools and techniques are necessary to provide interoperability as well as warehousing betw

Foundation XML for Flash Sas Jacobs,2006-11-14 XML is a completely platform agnostic data medium Flash is able to make use of XML data which is very useful when creating rich Internet applications It allows you to populate Flash web interfaces with data from almost any source that supports XML as a data medium be it databases raw XML files or more excitingly NET applications Web Services and even Microsoft Office applications like Excel and Word In this book Sas Jacobs first introduces XML itself what it is its syntax its associated technologies such as CSS and XSLT and how to get XML out of your applications in a format Flash can use Then she shows how to use the XML object to stream XML data into Flash and how to use the XMLConnector component and XML Sockets to build advanced Flash XML applications Numerous example applications are built throughout the book including an MP3 player XML photo gallery an Excel driven web catalog Access and Word driven content management systems and an XML driven chat application

Beginning Xml Databases Gavin Powell,2006 Market_Desc Web developers moving data to and from their web sites using XML Database developers using XML to facilitate data exchange Special Features Wrox XML is becoming the key standard for transferring data between databases and two and from the web replacing proprietary methods XML is supported by all major databases Takes a beginning approach assuming the reader has not done a lot of work with XML and databases which most readers won t have done at this point About The Book Written in the well known and successful Wrox Beginning and format with numerous hands on step by step examples Beginning XML Databases shows web developers how to simplify their database work with XML It also works for database programmers trying to find simpler more standard ways to exchange data between multiple databases either internally or with external customers and partners Some of the topics covered include Scripting database servers with XML and popular languages including ASP NET PHP and Perl Using XML to work with data tables in Oracle SQL Server and DB2 Native XML Databases Finding data with XML Data modeling with XML DTDs

Performance Comparison of Relational and Native-xml Databases Using the Semantics of the Land Command and Control Information Exchange Data Model (LC2IEDM) ,2005 Efforts to improve the military decision and action cycle have centered on automating the command and control process and improving interoperability among joint and coalition forces However information automation by itself can lead to increased operator overload when the way this information is stored and presented is not structured and consistently filtered The majority of messaging systems store

information in a document centric free text format that makes it difficult for command and control systems relational databases software agents and web portals to intelligently search the information Consistent structure and semantic meaning is essential when integrating these capabilities Military grade implementations must also provide high performance A widely accepted platform independent technology standard for representing document centric information is the Extensible Markup Language XML XML supports the structured representation of information in context through the use of metadata By using an XML Schema generated from MIP2s Land Command and Control Information Exchange Data Model LC2IEDM it is feasible to compare the syntactic strength of human readable XML documents with the semantics of LC2IEDM as used within a relational database The insert update retrieve and delete performance of a native XML database is compared against that of a relational database management system RDBMS implementing the same command and control data model LC2IEDM Additionally compression and parsing performance advantages of using various binary XML compression schemes is investigated Experimental measurements and analytic comparisons are made to determine whether the performance of a native XML database is a disadvantage to the use of XML Finally because of the globally significant potential of these interoperability improvements a number of look ahead items to future work are proposed including the use of
