forms of business are meant to automate large parts of the business processes involved To enable the automation of business processes across company borders a common language and a common understanding regarding legal implications are required for information systems to automatically handle deliveries and purchases Experiences with earlier forms of electronic business Electronic Data Interchange EDI allow us to understand these requirements in great detail Now a new platform for conducting electronic business between companies is emerging based on the XML standard which promises to significantly lower the costs of automating business processes across company borders In order to realize this potential the basic XML platform needs to be extended to cover all functions addressed by EDI systems How should this task be accomplished Specifically which types of organization should be involved with which parts of the standardization process This paper addresses these questions by drawing on experiences from earlier EDI systems
