9709/06, 0390/06	Paper 6 (Probability and Statistics 1), maximum raw mark 50
9709/07, 8719/07	Paper 7 (Probability and Statistics 2), maximum raw mark 50

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the November 2003 question papers for most IGCSE and GCE Advanced Level syllabuses.

Mathematics via Problems: Part 2: Geometry Alexey A. Zaslavsky, Mikhail B. Skopenkov, 2021-08-24 This book is a translation from Russian of Part II of the book Mathematics Through Problems From Olympiads and Math Circles to Profession Part I Algebra was recently published in the same series Part III Combinatorics will be published soon The main goal of this book is to develop important parts of mathematics through problems The authors tried to put together sequences of problems that allow high school students and some undergraduates with strong interest in mathematics to discover and recreate much of elementary mathematics and start edging into more sophisticated topics such as projective and affine geometry solid geometry and so on thus building a bridge between standard high school exercises and more intricate notions in geometry Definitions and or references for material that is not standard in the school curriculum are included To help students that might be unfamiliar with new material problems are carefully arranged to provide gradual introduction into each subject Problems are often accompanied by hints and or complete solutions The book is based on classes taught by the authors at different times at the Independent University of Moscow at a number of Moscow schools and math circles and at various summer schools It can be used by high school students and undergraduates their teachers and organizers of summer camps and math circles In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession The Ultimate Challenge Jeffrey C. Lagarias, 2023-04-19 The $3x + 1$ problem or Collatz problem concerns the following seemingly innocent arithmetic procedure applied to integers If an integer x is odd then multiply by three and add one while if it is even then divide by two The $3x + 1$ problem asks whether starting from any positive integer repeating this procedure over and over will eventually reach the number 1 Despite its simple appearance this problem is unsolved Generalizations of the problem are known to be undecidable and the problem itself is believed to be extraordinarily difficult This book reports on what is known on this problem It consists of a collection of papers which can be read independently of each other The book begins with two introductory papers one giving an overview and current status and the second giving history and basic results on the problem These are followed by three survey papers on the problem relating it to number theory and dynamical systems to Markov chains and ergodic theory and to logic and the theory of computation The next paper presents results on probabilistic models for behavior of the iteration This is followed by a paper giving the latest computational results on the problem which verify its truth for $x \leq 4 \cdot 10^{18}$ The book also reprints six early papers on the problem and related questions by L Collatz J H Conway H S M Coxeter C J Everett and R K Guy each with editorial commentary The book concludes with an annotated bibliography of work on the problem up to the year 2000 **A Course in Mathematics: Algebraic equations, functions of one variable, analytic geometry, differential calculus** Frederick Shenstone Woods, Frederick Harold Bailey, 1907

Mathematical Problems and Puzzles S. Straszewicz, 2014-06-28 Popular Lectures in Mathematics Volume 12

Mathematical Problems and Puzzles From the Polish Mathematical Olympiads contains sample problems from various fields of mathematics including arithmetic algebra geometry and trigonometry The contest for secondary school pupils known as the Mathematical Olympiad has been held in Poland every year since 1949 50 This book is composed of two main parts Part I considers the problems and solutions about integers polynomials algebraic fractions and irrational experience Part II focuses on the problems of geometry and trigonometric transformation along with their solutions The provided solutions aim to extend the student s knowledge of mathematics and train them in mathematical thinking This book will prove useful to secondary school mathematics teachers and students [Mathematics Department Formula Book Mathematics](#)

Ross Honsberger, 1996 Ross Honsberger s love of mathematics comes through very clearly in From Erds to Kiev He presents intriguing stimulating problems that can be solved with elementary mathematical techniques It will give pleasure to motivated students and their teachers but it will also appeal to anyone who enjoys a mathematical challenge Most of the problems in the collection have appeared on national or international Olympiads or other contests Thus they are quite challenging with solutions that are all the more rewarding The solutions use straightforward arguments from elementary mathematics often not very technical arguments with only the occasional foray into sophisticated or advanced ideas Anyone familiar with elementary mathematics can appreciate a large part of the book The problems included in this collection are taken from geometry number theory probability and combinatorics Solutions to the problems are included **Silver**

Shidlovskii, 2011-06-01 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 30 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob [The Transposing](#)

Method of Solving Algebra Equations Wayne R. Matson, Hoover, Dale, 2010-10-28 This book offers one proven solution to a major problem Nationally 90 % of entering college freshmen can't solve equations Obviously something is wrong The Transposing Method of Solving Equations is a far superior method than the traditional Whatever you do to one side you do to the other side Method taught in schools today With The Transposing Method you will be able to solve equations with 1 3 the steps and in significantly less time and you will eliminate a lot of messy scratch work The two methods are compared in the book The book also provides a Diagnostic Test with 10 simple equations 90 % of college students can not even get 2 correct With just a few simple rules you will be able to solve every equation you will encounter in a typical School Algebra and or College Algebra course There is no difference between High School Algebra and College Algebra Algebra is Algebra This book is a Self Teaching Course to help you Solve ALL Equations This book will help you NOW and be your Reference for any FUTURE Math Course I have enjoyed collaborating with Professor Matson the past two years at KSU Dr Matson brings many years of teaching expertise and a wide range of related work experience including the space program into the classroom His students recent results on tests exams were the highest that I have seen in my ten years at this University When Dr Matson noted a deficiency in the current textbook he began authoring new textbooks for entry level students I have been proofing the textbooks and can attest to their rigor and effectiveness in helping other instructors to have the success Dr Matson has achieved Students would make a significant step forward in their mastery of mathematical concepts by being in the classroom with Dr Matson and or obtaining copies of his recently published textbooks Ronald Hoover Mathematics Instructor Kennesaw State University **Lectures on Transcendental Numbers** K. Mahler, 2006-11-14 *Equations and Inequalities* Jiri Herman, Radan Kucera, Jaromir Simsa, 2000-03-23 A look at solving problems in three areas of classical elementary mathematics equations and systems of equations of various kinds algebraic inequalities and elementary number theory in particular divisibility and diophantine equations In each topic brief theoretical discussions are followed by carefully worked out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems While it emphasizes some methods that are not usually covered in beginning university courses the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here With approximately 330 examples and 760 exercises **The Mathematical Olympiad Handbook** Anthony Gardiner, 1997 Mathematical Olympiad competitions started in Hungary at the end of the nineteenth century and are now held internationally They bring together able secondary school pupils who attempt to solve problems which develop their mathematical skills Olympiad problems are unpredictable and have no obvious starting point and although they require only the skills learnt in ordinary school problems they can seem much harder The Mathematical Olympiad Handbook introduces readers to these challenging problems and aims to convince them that Olympiads are not just for a select minority The book contains problems from the first 32 British Mathematical Olympiad BMO papers 1965 96 and gives hints and outline solutions to each problem from 1975 onwards An overview is

given of the basic mathematical skills needed and a list of books for further reading is provided Working through the exercises provides a valuable source of extension and enrichment for all pupils and adults interested in mathematics
