Imagination Kieran M. Murphy, 2020-04-02 How does the imagination work How can it lead to both reverie and scientific
insight In this book Kieran M Murphy sheds new light on these perennial questions by showing how they have been closely
tied to the history of electromagnetism The discovery in 1820 of a mysterious relationship between electricity and magnetism
led not only to technological inventions such as the dynamo and telegraph which ushered in the electric age but also to a
profound reconceptualization of nature and the role the imagination plays in it From the literary experiments of Edgar Allan
Poe Honor de Balzac Villiers de l'Isle Adam and Andr Breton to the creative leaps of Michael Faraday and Albert Einstein
Murphy illuminates how electromagnetism legitimized imaginative modes of reasoning based on a more acute sense of
interconnection and a renewed interest in how metonymic relations could reveal the order of things Murphy organizes his
study around real and imagined electromagnetic devices ranging from Faraday's world changing induction experiment to
new types of chains and automata in order to demonstrate how they provided a material foundation for rethinking the nature

of difference and relation in physical and metaphysical explorations of the world human relationships language and binaries such as life and death This overlooked exchange between science and literature brings a fresh perspective to the critical debates that shaped the nineteenth century Extensively researched and convincingly argued this pathbreaking book addresses a significant lacuna in modern literary criticism and deepens our understanding of both the history of literature and the history of scientific thinking **A Treatise on Electricity and Magnetism** James Clerk Maxwell,2024-02-26

Reprint of the original first published in 1881 **Transformation and Convergence in the Frame of Knowledge** Thomas F. Torrance,1998-04-29 The essays which make up this volume arise out of the author s ongoing engagement with the tension between Christian theology and the general frame of thought that has dominated European culture for several hundred years The early Christian Church set about not only to communicate the Gospel to the Greco Roman world but also to transform the prevailing mode of thought and culture so that the Gospel could take deep root and develop within it Therefore in every age says Thomas F Torrance the Christian faith must be brought to bear transformingly upon the whole frame of human culture science and philosophy
