Body Tracking in Healthcare Kenton O'Hara,Cecily Morrison,Abigail Sellen,Nadia Bianchi-Berthouze,Cathy Craig,2022-05-31 Within the context of healthcare there has been a long standing interest in understanding the posture and movement of the human body Gait analysis work over the years has looked to articulate the patterns and parameters of this movement both for a normal healthy body and in a range of movement based disorders In recent years these efforts to understand the moving body have been transformed by significant advances in sensing technologies and computational analysis techniques all offering new ways for the moving body to be tracked measured and interpreted While much of this work has been largely research focused as the field matures we are seeing more shifts into clinical practice As a consequence there is an increasing need to understand these sensing technologies over and above the specific capabilities to track measure and infer patterns of movement in themselves Rather there is an imperative to understand how the material form of these technologies enables them also to be situated in everyday healthcare contexts and practices There are significant mutually interdependent ties between the fundamental characteristics and assumptions of these technologies and the configurations of everyday collaborative practices that are possible them Our attention then must look to social clinical and technical relations pertaining to these various body technologies that may play out in particular ways across a range of different healthcare contexts and stakeholders Our aim in this book is to explore these issues with key examples illustrating how social contexts of use relate to the properties and assumptions bound up in particular choices of body tracking technology We do this through a focus on three core application areas in healthcare assessment rehabilitation and surgical interaction and recent efforts to apply body tracking technologies to them
