Xs Small Structures Green Architecture:

XS Phyllis Richardson, 2007-03-13 A follow up to the highly successful XS Big Ideas Small Buildings this book features contemporary solutions to two of today's most challenging problems how to conserve space and help save the environment. The design goals of the 40 houses included here are to build as small as possible to harmonize with the site to use natural heating and cooling techniques and above all to combine aesthetic beauty with ecological sensitivity. The houses are striking in appearance inexpensive to build and totally functional and will serve as inspiration for architects and potential owners. Designed by a variety of young international architects among them Patkau Shop Sean Godsel and Klein Dytham the projects featured here reveal an extraordinary degree of ingenuity within a tight creative context or budget. As homeowners become more environmentally savvy and demand environmentally sound choices a new generation of architects and builders is creating warm inviting homes that cause only a fraction of the ecological impact of conventional building methods. The book is also a compelling manifesto that illustrates how ecological responsibility can reinvigorate contemporary architecture. Sustainability is not just good for the environment it also propels architects toward new innovations and greater creativity.

XS Green Phyllis Richardson, 2007 What does it mean to be green. This book a follow up to the cult hit XS is a celebration of idiosyncratic small buildings and asks what we mean by building green and how doing so enriches the world around us. The projects here are not only about building well but about seeing well. They embrace the spectrum of small structures from traditional nature huts and ornamental follies to the charmingly surreal. Buildings that look after people can also be the ones that look after the earth.

Dwell, 2007-06 At Dwell we're staging a minor revolution. We think that it's possible to live in a house or apartment by a bold modern architect to own furniture and products that are exceptionally well designed and still be a regular human being. We think that good design is an integral part of real life. And that real life has been conspicuous by its absence in most design and architecture magazines.

Eco-Architecture V C.A. Brebbia, R. Pulselli, 2014-09-24 This book contains the proceedings of the fifth International Conference on Harmonisation between Architecture and Nature. Eco Architecture 2014. Eco Architecture implies a new approach to the design process intended to harmonise its products with nature. This involves ideas such as minimum use of energy at each stage of the building process taking into account the amount required during the extraction and transportation of materials their fabrication assembly building erection maintenance and eventual future recycling. Another important issue is the adaptation of the architectural design to the natural environment learning from nature and long time honoured samples of traditional constructions. The papers in this book deal with topics such as building technologies design by passive systems design with nature cultural sensitivity life cycle assessment resources and rehabilitation and many others. Also included are case studies from many different places around the world. Eco Architecture by definition is a highly multi disciplinary subject. Eco Architecture V Harmonisation between Architecture and Nature will therefore be of interest to in addition to architects many other professionals including

engineers planners physical scientists sociologists and economists Topics covered include Design with nature Energy efficiency Building technologies Ecological impacts of materials Bioclimatic design Water quality Green facades Ecological and cultural sensitivity Education and training Case studies Design by passive systems Adapted reuse Life cycle assessment and durability Transformative design Sustainability indices in architecture

The Greening of Architecture Phillip James Tabb,A. Senem Deviren,2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture
