

Hearing voices: A spectrum of experience

It is increasingly recognised that voice-hearing events are often and often a continuum or spectrum that includes ordinary verbal thinking, day-dreaming and intrusive thoughts. We all have the capacity for 'hearing voices', it's just that some of us are more likely than others to have more intense voices, or to hear them more often.

Did you know?

Only **1%** of people have frequent voice-hearing experiences and no mental health problems.

A comparable 1% have a diagnosis of schizophrenia. Around 20% of this group will hear voices.

What is the difference between voice-hearing and my own inner voice?

Little research of our own voice which affects nearly all of us. Most people report that hearing a voice is the absence of any control about how it comes from the self.

The content and thoughts of the voice or voices is experienced as coming from outside or outside the head - some people experience that sound as if they are coming from the outside environment. But many voices are experienced as internal or they come up in our own inner world.
